I for one am not a advocate of wind generating facilities as a solution for reliable source of electric energy. I believe after roughly 40 yrs & 20 yrs observing the growth demand of this energy. We cannot put our faith in wind-gen. Looking at the broad consumption picture, who in the industrial use picture, could rely or operate a business on wind energy. The critical time of year here is from mid-sept to mid-apr.. This is when a crises could occur, and it seem those in power-gen are linding a blind eye or absent mind as to the reliable source of generation we should be putting our investment in. Puyet is wheeling & dealing with a consortum to sell. This addition as proposed simply is promotion material. I for one don't object to this expansion, but its just another move in the wrong solution. In tracking other power co., they are seriously considering ~~+~~ atomic + new coal fired tech to meet ~~their~~ their ~~fut~~ future demands. Also the gov. of Cal., Florida, Ohio and energy advocates are becoming serious [illegible]

IN A SENSE ITS TRAGIC THAT THE DECISION MAKERS WERE NOT SERVICE WORKERS DURING TIMES WHEN CUSTOMERS WE DESPERATE FOR ELECTRIC HEAT OR GETTING THEIR PRODUCTION FACILITIES OPERATING IN COLD WEATHER OR TIMES OF EMERGENCY. ONLY THEN WOULD OUR EFFORTS BE PLACED IN DEVELOPING A RELIABLY A LONG RANGE PLAN FOR ELECTRICAL ENERGY

AS EVER.
