

Resolution No. 199

*Superseded by
Res. #205*

WHEREAS, Article VI.A.1. of the WNP-3/5 Site Certification Agreement states:

Supply System agrees to provide visitor information facilities for the project.

and

WHEREAS, Subsequent to the certification of WNP-3/5 by the Energy Facility Site Evaluation Council, the federal government has promulgated certain regulations requiring a utility to construct an Emergency Operations Facility, and making it necessary to have a control room simulator; and

WHEREAS, The Supply System has studied the option of combining the Visitor Information Center, Emergency Operations Facility, Control Room Simulator, plant model and certain health physics facilities into one facility; and

WHEREAS, The Supply System has concluded that combining the aforementioned functions into one facility will result in significant savings to the ratepayers and benefits to the visiting public, including such benefits as visits of higher educational impact, multiple use of a significant portion of the building, and common usage of certain core facilities; and

WHEREAS, The Supply System briefed the Council on its proposal for a combined facility on May 11, 1981, and transmitted to the Council a formal written submittal on its proposal on August 10, 1981; and

WHEREAS, The Council has studied the proposal, and consulted with the Department of Emergency Services and the Department of Social and Health Services as to their significant roles in events requiring activation of the Emergency Operations Facility.

NOW, THEREFORE, BE IT RESOLVED, That the Energy Facility Site Evaluation Council hereby affirms the concept of a Multipurpose Facility for WNP-3/5, which facility will house the Visitor Information Center, the Emergency Operations Facility, the Control Room Simulator, and such other health, safety, training or administrative offices as may be appropriate; and

BE IT FURTHER RESOLVED, That the Energy Facility Site Evaluation Council approves the site proposed for the Multipurpose Facility, such site being immediately northeast of the Cooley Laydown Area, provided further that the Supply System shall include provisions in the onsite emergency plan for the following:

1. Access to or evacuation from the Multipurpose Facility in the event of an incident, during both flood and normal conditions, and a plan for control of public access to the Multipurpose Facility;
2. Food service and housing for personnel and others who may be precluded from leaving the facility; and
3. A description of the functions and types of emergency communication and support equipment to be utilized in the Multipurpose Facility.

BE IT FURTHER RESOLVED, That the Energy Facility Site Evaluation Council hereby finds that the Supply System's Visitor Information Facility and program, as described in the Supply System's August 10, 1981 submittal, will, when completed and when the site emergency response plan has been approved, effectively comply with Article VI.A.1. of the WNP-3/5 Site Certification Agreement regarding visitor information facilities.

Dated this 26th day of October, 1981.

Washington State Energy Facility
Site Evaluation Council
