## Memorandum

**To:** File  
**From:** John Wong  
**CC:** K. McGaffey, T. Pors, B. Clothier, K. Chaney, B. Thompson  
**Date:** June 16, 2000  
**Re:** May 18, 2000 Photo Record

---

*J1 – Photograph at J1; Water at -9.0"/seepage at -8.5"; wetland and nonwetland plants (Creeping foxtail and Western pearlywort).*

*J2 – Photograph at J2; no water or saturation to bottom of hole (-15"); wetland and nonwetland plants (Creeping foxtail and Western pearlywort). Other nonwetland or facultative plants are shepards purse, clover, carrot family.*

*J3 – Photograph at J3; seepage at -12.0"; wetland and nonwetland plants (Creeping foxtail and Western pearlywort)*

*J7 – Photograph at J7; seepage at -10.0"; saturation at -8.5"; located at edge of David Evans wetland boundary; wetland and nonwetland plants (Creeping foxtail, buttercup, Western pearlywort, thistle)*

*E18 – Photograph at E18; seepage at -12.0"; wetland and nonwetland plants (Creeping foxtail and Western pearlywort)*

*Panorama – Photograph taken from sample #4, looking northeast into David Evans wetland; yellow tinge is a Brassica sp., likely field mustard or rape, a nonwetland species*

These are for your review. They indicate some pretty dry soils in areas. J1 and J7 are located in, or at the David Evans/Bexar wetland. J2, J3 and E18 were included by DOE as wetland.

John Wong
