Letter 22

APR 19 2000

Attention:

Dear Elected Official/Governing Body:

I am writing to protest the construction of the Sumas Energy 2 natural gas fired power plant in Sumas, Washington.

This plant will emit more than 200 tons of nitrous oxide, 100 tons of ammonia matter, 90 tons of carbon monoxide per year and 2.16 million tons of carbon dioxide per year. This is no small project and these calculations do not take into consideration the accurate or residual effects of these emissions.

I believe that the DEIS document prepared for the application with the energy plant, which is where these emissions will go, is known to have the worst air quality. The plant will draw huge amounts of valuable water from the Sumas/Abbotsford aquifer and reduce the levels of the farm wells. As to the possibility of the transmission lines, this is just not something that I as a citizen of Abbotsford want to accept. The effect on our health and economic climate. This does not even address the effluent coming from the plant.

I do not wish to see this project go ahead and urge you to use your powers to stop this proposal. Please listen to the citizens that will be most affected by this project.

KILL THIS PROJECT BEFORE IT  
WE DO NOT WANT AMERICAN  
DESTROYING OUR TOWN AND  
IN YOUR OWN BACK YARD,  
THE PUG IN THIS BOGS &

JIM McDONALD

power plant in Sumas.

200 tons of particulate matter per year. This is the cumulative or residual effects of

Sumas - EFSAC has many power plants in the area north east of this town in Canada. As well this plant, which will eventually be going north into Canada. The emissions will have a serious impact on the environment that will be in the

persuasion to put an end to this project.
