Can you think of issues the Council should consider in siting this project?  
What are your concerns? We are very interested in what you have to say.

Please write any comments or questions you have below:

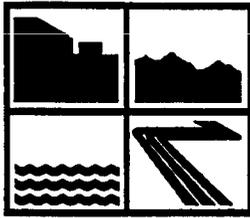

Please consider GP and other local companies when you decide where to sell your excess power. I support this plant and I hope it goes through.

*Use the back of this form or attach additional pages if you need more room.*

Please place this form in the drop box, or mail or fax to:

Date: 5/2/01

Can you think of issues the Council should consider in siting this project?  
What are your concerns? We are very interested in what you have to say.

Please write any comments or questions you have below:

- ① THE NEED FOR ENERGY IN OUR AREA.
- ② THE NEED FOR FAMILY WAGE JOBS IN OUR AREA.
- ③ B.P.'S EXCELLENT TRACK RECORD AS A STWARD OF THE ENVIRONMENT.

THIS SEEMS TO BE A NO-BRAINER, WE NEED JOBS WE NEED ENERGY AND B.P. HAS BEEN AN EXCELLENT NEIGHBOR AND IS HEAVILY INVOLVED IN THE COMMUNITY -

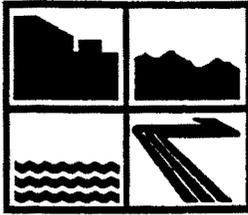

STEVE JENNINGS - CITIZEN - PRESIDENT FEDERAL CHAMBER OF COMMERCE

*As a former regulator for the BP/ARCO Cherry Point refinery, I can attest to the Cherry Point Environmental commitment. This is a good project and it makes sense.*

Subject: Comments for Mike Elling re: BP Cherry Point CoGeneration Project Proposal

Mr. Elling:

I am a resident of the Cherry Point area and attended the public hearing on May 2, 2001, regarding BP's Cherry Point CoGeneration Project Proposal.

In general, the proposal looks to make a lot of sense as a solution for BP's

and the community's power supply problems without adverse environmental impact and I support the project as initially proposed.

However, there are several outstanding issues which the Council needs to consider before issuing recommendations to the Governor including:

1. Water Quality- The plan calls for BP to use the existing wastewater treatment facility. It is my understanding that the system is currently undergoing permit reissue and that part of this involves a Department of Ecology "Agreed Order" to complete a facility sampling plan by November 2002

and to implement the plan (including detailed hydrologic studies) by November

2004. This timetable seemed too slow to me for the existing use and it seems

reasonable that the preparation of the sampling plan and completion of these

studies should be finished before the use of the facility is expanded.

2. Noise Issues-It would be nice if the facility did not greatly expand the

current noise levels from the refinery. Some questions to address:

- \* What baseline data exists?

- \* Will the Council look at cumulative noise level impacts?

- \* Will Puget Sound Energy's peaking power facility to the west of the refinery be shut down and what impact will this have to mitigate noise (as well as air) pollution?

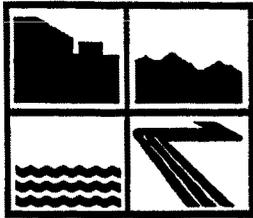

- \* Vegetation Noise (and visibility) Screening-The current refinery and cooling towers are screened from Grandview Avenue by planted vegetation which appears to serve as both a noise and visual barrier. The vegetation appears

to be harvestable timber which might someday be removed. What is the long-term plan for natural vegetation screening for noise and visibility protection.

If you have any questions, I can be reached via email or at 360-371-5998.

Good luck with the project.

WILLY LYNCH

I am actively involved in trying to improve the air quality in the Albatross area. At present my wife is a prisoner in our home for all the sunny summer days when air pollution is at its worse. There are a number of power generating plants in the works for this area at present (including SB2 right on our doorstep). The future looks bleak - the weak will die and the rest will get sick. While Americans on both sides of the border lust this swimming pool and drive SUV's on cheap gas, let batteries become a conservation as an element of our quality of life?

Email: \_\_\_\_\_

Can you think of issues the Council should consider in siting this project?  
What are your concerns? We are very interested in what you have to say.

Please write any comments or questions you have below:

- 1) Will conservation of power be part of the EIS?
- 2) Where will resold power be wheeled?
- 3) Concern about substitute energy if NG is not used. Diesel, propane, etc which will be used?
- 4) What would be net pollution reduction if existing boilers were replaced with a new boiler instead of the cogeneration facility?
- 5) Noise issues
- 6) Visibility of steam from cooling towers. How visible will it be?

Thank you for the opportunity to express our opinion
