

## **2.7 CHARACTERISTICS OF AQUATIC DISCHARGE SYSTEM**

*WAC 463-42-185 Proposal – Characteristics of aquatic discharge systems. Where discharges into a watercourse are involved, the applicant shall identify outfall configurations and show proposed locations.*

Pursuant to WAC 463-42-115 the Applicant requests a waiver of the information required by WAC 463-42-185, which calls for a description of the discharge to a watercourse. There will be no discharge to a watercourse. The proposed facility uses wind as its source of energy production and not thermal energy, therefore water is not used in that process and there will be no discharge. The only water to be used in the operation of the proposed facility will be for domestic purposes from a small domestic, exempt well at the O&M building. This well will provide water for bathroom and kitchen use, and some minor normal maintenance use, and is expected to consume less than 1,000 gallons per day. Wastewater from the O&M facility will be discharged to a domestic septic tank installed pursuant to the requirements of Kittitas County Environmental Health Department.
