**Subject:** Reference Application No. 2013-01/Docket No. EF-131590: Please reject the proposed Tesoro Savage oil export terminal project

Dear Governor Inslee and Washington EFSEC:

I urge you to assess the full impact of Tesoro Savage's proposal to ship 360,000 barrels of oil each day through Spokane, the Columbia River Gorge National Scenic Area, Vancouver and the Columbia River. Oil-by-rail and export by ship is a bad deal for Washington State and the entire Northwest region. The project comes at a steep price for rail and river communities throughout the state and along the Columbia River, yet offers few jobs in return. Based on the far reaching impacts of this project, I urge you to deny Tesoro Savage's unprecedented proposal.

The public safety and environmental impacts of the state's largest pipeline-on-wheels proposal deserve close scrutiny. For example, EFSEC must assess:

- The potential impacts of a large train-related oil spill along the rail route in Washington and beyond.
- The transportation and public health impacts of additional unit train traffic through communities along the proposed oil-by-rail route. This includes evaluating emergency response capabilities in Vancouver, where oil trains would deliver and store oil, and other communities along the rail and shipping route.
- The increased risk of an oil tanker spill on Washington State waters and along the shipping route.
- The project's impact on climate change. This analysis should include climate change impacts from crude oil as well as tar sands oil from cradle to grave.

After carefully considering the safety, environmental, and climate risks associated with the project, I respectfully ask you to deny Tesoro Savage's application.

Thank you.

Vicky Guyon

**Subject:** Reference Application No. 2013-01/Docket No. EF-131590: Please reject the proposed Tesoro Savage oil export terminal project

Dear Governor Inslee and Washington EFSEC:

I urge you to assess the full impact of Tesoro Savage's proposal to ship 360,000 barrels of oil each day through Spokane, the Columbia River Gorge National Scenic Area, Vancouver and the Columbia River. Oil-by-rail and export by ship is a bad deal for Washington State and the entire Northwest region. The project comes at a steep price for rail and river communities throughout the state and along the Columbia River, yet offers few jobs in return. Based on the far reaching impacts of this project, I urge you to deny Tesoro Savage's unprecedented proposal.

The public safety and environmental impacts of the state's largest pipeline-on-wheels proposal deserve close scrutiny. For example, EFSEC must assess:

- The potential impacts of a large train-related oil spill along the rail route in Washington and beyond.
- The transportation and public health impacts of additional unit train traffic through communities along the proposed oil-by-rail route. This includes evaluating emergency response capabilities in Vancouver, where oil trains would deliver and store oil, and other communities along the rail and shipping route.
- The increased risk of an oil tanker spill on Washington State waters and along the shipping route.
- The project's impact on climate change. This analysis should include climate change impacts from crude oil as well as tar sands oil from cradle to grave.

After carefully considering the safety, environmental, and climate risks associated with the project, I respectfully ask you to deny Tesoro Savage's application.

Thank you.

Andres Antuna

**Subject:** Oil Trains-NO, NO, NO

I and my family do not want oil trains running through here. We do not want any more trains running through period. The noise pollution from them already is horrible. They blow those whistles all the way from the start of town to the end of town and they infiltrate every part of a person's house that is within a mile, especially if you live just a little up the hill from them. That along with the noise pollution that is going to be generated by the new north south freeway intersections is going to make it astronomical. Then you also have the pollution rolling off the cars and the potential for oil spills and explosions killing people and all for a couple of hundred jobs in the outcome for a terminal over on the west side of the state. Again, we get all of the crap and they get the benefit.

No, we do not want this. Take it somewhere else.

**Subject:** BNSF oil trains, coal trains through Spokane to export terminals

Hi

Not sure who gets this, but the old regulations nineteenth century congresses bought into to get a railroad line across the country are no longer appropriate. BNSF lawyers will be sure to cite them ad nauseam, BNSF can't count!! Several highly populated areas, including Spokane, WA, are at risk of more mishaps the more often trains roll through. I have sat at a Browns Addition\*\* laundromat across the street from Sunset Junction and counted three or more trains in the hour and a half I am there. (of course the frequency varies)This is around noon.I can expect to see an oil carrying train, and a coal train, plus the general cargo trains, and the "who knows what's in there?" trains. I can hear night trains roll by where I live, a mile and a half way. and this is getting more frequent. The other night I wondered what was alarming an engineer who was blasting the whistle for about two minutes on the west side of town to, I assume, get something off the tracks. The Latah trestle is a disaster not waiting to happen, A derailment already occured a few years back, of a few general freight cars. I kept the photos.

Since BNSF won't cooperate, since antiquated regulations allow them to avoid paying for repairs to infrastructure, the best thing Washington state regulators can to is not allow the receiving ports to be built until (a) the oil and coal train routes go through sparsely populated areas and (b) some routes are not allowed for oil and coal train transport. Might be nice to not send them through the Columbia river gorge either. BNSF officials tout jobs and come up with statistics to support them. Not gonna happen in Spokane!!

Might also be nice if all extractive industries and the transportation infrastructures really accepted that if we humans are gonna mess around in Mama's Kitchen we better keep it from being trashed and clean up our messes. Too bad to shrink that bottom line!!Aw come on, the tax lawyers can figure out a write off!!

\*\* Brown's addition is a high density low income residential area on the western edge of Spokane's downtown. Three BNSF tracks merge there near Sunset Junction.

Thank you
