December 12th, 2017

EFSEC Staff,

For your consideration,

Reasons that irrigated farm land is not the proper use or site for Industrial Solar-

716,870 Gallons of ground water per acre are lost by NOT irrigation Under Ellensburg Water Company (EWC)

Non Pro-ratable Senior 1884 Rights

1 Acre foot= 325,850 Gallons

EWC acres= 9749

EWC Water right=43,840 acre feet

EWC entitlement=4.4 acre feet (not counting return flow)

325,850 Gallon per acre X 4.4 acre feet = 1,433,740 Gallons Applied on Each Acre

50% water return flow consumptive plant use

50% goes into Ground

50% of 1,433,740 = 716,870 Gallons per acre into ground under EWC

All Irrigation Companies & Districts contribute a Substantial amount of water to the Aquifer!

Attached is research by Dick Bain Submitted & accepted into evidence during Acquavella and water rights adjudication.

Submitted today by Ron Poulsen Ellensburg Water Company Board of Directors
Here's your mitigation:

EWC (C.F.O) entitlement = 4.4 ac

1 acre foot = (AF) 325,850 gallons on each acre

\[
\frac{325,850 \text{ gallons per ac}}{4.4 \text{ ac}} = 716,870 \text{ gallons on each acre. (contribution to water table)}
\]

50% of H2O runs off in the form of return flow or consumptive plant use. 50% of 716,870 gallons = 716,870 gallons

716,870 \times \# of Acre owned

Irrigation season is 7 months (210 days)

Well use is 365 days @ 350 gallons/day = 127,750 gallons

Contribution to ground water & water table = 716,870 gallon/ac

Senior NON Proratable 1884

---

9,749.30 acres
1,139.40 acre ft

Comment subject/Issue: Land Use
Comment:

A faro to question the use of prime farm land when there's so much land that's not prime. It seems the projects could figure out a way to store the energy collected from solar sites to where ever that is stored.

Comment subject/Issue: Tuusso Land Use

Comment:

I am more pro-solar than almost anyone I know. I am also extremely pro-democracy. Lastly, I am an engineer and a designer by profession and see things through that lens. BUT, I think local food is the only thing that is more important than local energy. Tuusso needs to order of most necessary are: air (5 mins to death), water (10 hours until death), and food (weeks until death). Tuusso is not a divination of similar order that requires electricity that immediately results in end of life. In the future when transportation costs skyrocket these concerns will be more and more important. This for this reason regarding priorities, and because I feel that EFSEC is an anti-democratic organization. I feel that it is of extreme significance that the county be allowed more time for resolving the various legislation that must push these projects off of extremely precious farmland. This is eastern Washington, a desert if it weren't for the massive investment in irrigating and agriculture. These projects belong on land that is CAR LESS suitable for sustaining local lives in the future.

Comment subject/Issue: Anticipating and regulating land planning for constant placement with regard to agriculture & water in an arid climate.

Comment:

Hello,

I am very concerned about what seems to be a disregard for the definition of agricultural fondo lands in Kittitas County. Specifically, the classification of "commercial agriculture," this has nothing to do with me being a "NIMBY" (not in my backyard). I spent the last year, traveling around the country, with a Solar PV system, planning my recommendations. I am currently working on another PV project, to power another adventure.

I have to say, that I never saw utility scale PV projects on irrigated lands. Within any of the more arid climates I traveled through, I saw plenty of utility scale projects in grassy, wet prairies like Florida, or North Carolina - places where the climate, mountains, plenty of humidity, and therefore Rich soils. Plenty of water for farming.

I understand that a lot of people are complaining about desertification and again, I want to be very clear that this is not my concern. There is plenty of an abundant supply of lands not used for farming or crops in Kittitas Valley. In fact, many of these are at a slightly higher elevation and won't be affected by the winter "stagnant air" inversions.

OCCUR FREQUENTLY IN KITITAS VALLEY, THROUGHOUT THE WINTER. I SAY THIS, WITH REGARD FOR, AND KNOWLEDGE OF, THE COMPLICATIONS OF SOLAR ARRAY PROJECTS & PERCENTAGE OF GRADE— THERE ARE STILL PLACES WHICH ARE NOT "HILLY."

I THINK THAT PEOPLE LIVING IN WEST OF THE CASCADES, (WHICH I HAVE SPENT SEVERAL YEARS LIVING "THERE") OFTEN FORGET THAT IT DOESN'T RAIN AS MUCH THROUGHOUT THE REST OF THE STATE. I DON'T THINK THERE HAS BEEN MUCH CONSIDERATION FOR SOILS AND WATER, WHILE PLANNING THESE PROJECTS. NOT TO MENTION A WETLAND IMPACT.

I UNDERSTAND THE PRESSURE THAT MUST BE UNDER. BY PUGET SOUND DIVERSITY AND THAT THEY WANT TO PROTECT THEIR INVESTMENTS INTO THESE FIVE PROJECTS. I UNDERSTAND HOW FRUSTRATING IT MUST BE TO WAIT ALL OF THESE MONTHS FOR KITITAS COUNTY TO FORMULATE THEIR OWN REGULATIONS FOR THESE SOLAR UTILITY PROJECTS.

THERE IS CURRENTLY A COMMITTEE WORKING TO FORMULATE THESE SITE REGULATIONS. IT SEEMS LIKE THE MOST REASONABLE AND LAWFUL ACTION TO TAKE WOULD BE TO AT LEAST LET THAT HAPPEN — THEN CHALLENGE IT, IF YOU "DON'T LIKE IT."

Looking over the plans for the five TUSSO projects, I noticed that "Kititas" is misspelled, on three out of five of the projects' titles. I feel like that is indicative of the regard this company, TUSSO, has for the local government. Okay, so that sounds like a rant, so I guess I will wrap this up.

Thank you for your time and consideration.

Comment: I am in favor of solar panels and solar power. The placement of these projects on irrigated land I am opposed to. I think farmland is priceless. Taking it out of farm production impacts the opportunity of future farmers making it may difficult to find farm land. We can have both farmland and solar if solar is responsibly placed out of irrigated areas.

Comment subject/Issue: Farm land use

Comment:
Preparation of Solar Power but concerned about loss of quality farm land. Farm land that was irrigated through public funding. The public funded irrigation should stay in service to the public as farmland. There are many acres in the country that are suitable for solar but not for producing farming. These projects should be relegated to suitable land and not on farmland. Further more, many of the proposed acres are in perennial grass that is able to absorb 60% of human produced carbon making them essential to clean air and water.

Comment: I am pro-solar but opposed to placing large solar projects on agricultural land. This is valuable farmland - and placing an industrial solar project in the proposed locations will not only misuse the farmland, it will change the character and value of our beautiful valley. Please locate this project on a different location.

Comment subject/Issue:

Comment:

1. Solar projects should not be located on land zoned for agriculture and in agricultural use.

2. This project should not receive expedited process. Solar is not consistent with land use zoning. I don't care if applicant is in a hurry.

3. The EFSEC should have done an adequate job notifying - proactively and in writing - all property owners and residents about this land use hearing. The vast majority of people didn't know about meeting and this fact is unacceptable.

4. This project does not directly benefit the people who live here.

5. The power points were impossible to read.

Comment subject/Issue: Solar increase

Comment:

I am very much in favor of increased solar development. It should serve our area first, then be sold elsewhere.

Re: Public Hearing and Land Use Consistency Hearing

The state mandated counties to comply with the Growth Management Act to preserve ag land and plan and control urban sprawl. King and other counties have taken steps to preserve ag land.

The placement of solar collectors on existing land eliminates that land for productive farm use. The limited acres in the TUUSSO current proposal is minimal acreage however once the precedent has been set the, there would be little justification to stop additional. There could be a patchwork of solar facilities over the entire county.

It seem irrational that counties are required to limit development on ag land under the GMA requirements but be forced to allow solar collectors (the term solar farms is ridiculous) to infringe on the same land.

The county should be allowed to establish the land use policy locally without the EFSEC overriding its decisions.
