6	In the Matter of	EFSEC Docket No. EF-170823
7 8	TUUSSO ENERGY-Columbia Solar Project	APPLICANT'S LEGAL MEMORANDUM RE LAND USE
9		
10	Legal Memorandum in Support of the Column and Compliance with Land Use	
11	I. INTRO	
12		
13		LLC ("TUUSSO") submitted to the Energy
14	Facility Site Evaluation Council ("EFSEC") an A	
15	develop, construct, and operate the Columbia Socionsist of five solar photovoltaic ("PV") generati	
16	located in unincorporated portions of Kittitas Co	
17	WAC chapter 463-43, TUUSSO requested that E	•
18	review and approval of the ASC. To be eligible:	*
19	project is consistent with and in compliance with	•
	zoning ordinances." RCW 80.50.075(1). TUUS	SO submits this Legal Memorandum to support
20	the Projects' consistency and compliance with K	ittitas County Code.
21		
22	II. BACK	GROUND
23	The Columbia Solar Projects are propose	d to be located at five site locations in Kittitas
24	County. Each Project site is on privately-owned	
25	the center of the City of Ellensburg. The Project	
26	The area surrounding Ellensburg where the Projection	

APPLICANT'S LEGAL MEMORANDUM RE LAND USE - 1

houses and farm buildings, flat agricultural fields, irrigation ditches, county roads and major highways.

TUUSSO undertook a multi-stage process to identify the proposed Project sites. At the outset, Kittitas County was identified as being uniquely situated among other Washington counties for solar development. Kittitas County has high solar insolation, available large land parcels, and is located within Puget Sound Energy's ("PSE") service territory (one of the only utilities in Washington with tariffs that support utility-scale solar). TUUSSO then applied criteria to identify potential sites within Kittitas County. First, TUUSSO specifically sought out land that was *already disturbed* (e.g., agricultural land). Additional criteria included: whether the land was zoned for utility-scale solar; whether the land was flat; degree of solar insolation; proximity to PSE's distribution lines and/or substations; and proximity to existing roads. Application of these criteria identified more than 100 sites. TUUSSO approached the landowners of those sites, and then eliminated sites as possibilities based on any number of the following factors: landowner disinterest; unusual site risks (e.g., flooding, protected species); high landowner lease rates; distribution lines not owned by PSE; or, over-utilized distribution lines.

The above-described selection process led to the identification of the five Project sites identified in the ASC: Camas, Fumaria, Penstemon, Typha, and Urtica. The Camas, Penstemon, and Typha sites are on land zoned as Commercial Agriculture ("CA"). The Fumaria and Urtica sites are on land zoned as Rural Working – Agriculture 20 ("A-20"). The Camas, Penstemon, and Urtica sites are currently actively managed for agriculture. The Fumaria site was previously heavily grazed, but is now fallow and dominated by weeds and non-native plant species. The Typha site consists of irrigated and grazed pasture, but is likewise now dominated by weeds and non-native plant species.

III. APPLICABLE STANDARDS

Under Kittitas County Code (cited as KCC), each of the Projects qualifies as a "major alternative energy facility." KCC 17.61.010(9). Major alternative energy facilities are

¹ "Major alternative energy facility" means "a hydroelectric plant, solar farm, or wind farm that is not a minor alternative energy facility." KCC 17.61.010(9).

1	permitted as a "conditional use" in the A-20 and CA zones. KCC 17.61.020. Kittitas County
2	Code requires that a conditional use satisfy the following criteria:
3	1. The proposed use is essential or desirable to the public convenience and not detrimental or injurious to the public health, peace, or safety or to the character of the surrounding
4	neighborhood. 2. The proposed use at the proposed location will not be unreasonably detrimental to the
5	economic welfare of the county and that it will not create excessive public cost for facilities and services by finding that:
6	A. The proposed use will be adequately serviced by existing facilities such as highways,
7	roads, police and fire protection, irrigation and drainage structures, refuse disposal, water and sewers, and schools; or
8	B. The applicant shall provide such facilities; or
9	C. The proposed use will be of sufficient economic benefit to offset additional public costs or economic detriment.
10	3. The proposed use complies with relevant development standards and criteria for approval set forth in this title or other applicable provisions of Kittitas County Code.
11	4. The proposed use will mitigate material impacts of the development, whether environmental or otherwise.
12	5. The proposed use will ensure compatibility with existing neighboring land uses.
13	6. The proposed use is consistent with the intent and character of the zoning district in which it is located.
	7. For conditional uses outside of Urban Growth Areas, the proposed use:
14	A. Is consistent with the intent, goals, policies, and objectives of the Kittitas County
15	Comprehensive Plan, including the policies of Chapter 8, Rural and Resource Lands;
1.6	B. Preserves "rural character" as defined in the Growth Management Act (RCW
16	36.70A.030(15)); C. Requires only rural government services; and
17	D. Does not compromise the long term viability of designated resource lands.
18	
	KCC 17.60A.015.
19	Because the Projects satisfy the conditional use criteria at KCC 17.60A.015, they are
20	"consistent and in compliance" with Kittitas County's applicable land use plans and zoning
21	ordinances.
22	
23	
24	
25	² A conditional use is a "use which may be permitted in a zone classification following
26	review under the provisions of KCC Chapter 17.60A." KCC 17.08.550.

1 2	Criteria 1.	The proposed use is essential or desirable to the public convenience and not detrimental or injurious to the public health, peace, or safety or to the character of the surrounding neighborhood. KCC 17.60A.015(1).
3	Essen	itial and Desirable to the Public Convenience
4		tate of Washington has enacted aggressive legal and policy standards in pursuit of
5		ble energy generation within its borders, and the Projects advance that pursuit.
6		e's Renewable Portfolio Standards ("RPS") mandates that 9 percent of the State's
	•	generated from renewable sources by 2016, increasing to 15 percent by 2020. The
7	Projects would	ld help the State meet the RPS by producing up to 25 MW of clean, locally
8	produced ren	ewable energy.
9	The P	rojects also align with the State's policy to increase renewable energy use by
10	focusing on le	ocal sources. RCW 82.16.110 in its findings and intent conveys:
11		"The legislature finds that the use of renewable energy sources
12		generated from local sources such as solar and wind power benefit our state by reducing the load on the state's electrical energy grid,
13		by providing nonpolluting sources of electricity generation, and by
14		the creation of jobs for local industries that develop and sell renewable energy products and technologies."
	Lilron	
15	Likev	vise, the State's Energy Independence Act declares:
16		"Increasing energy conservation and the use of appropriately sited renewable energy facilities builds on the strong foundation of low-
17		cost renewable hydroelectric generation in Washington state and will promote energy independence in the state and the Pacific
18		Northwest region. Making the most of our plentiful local resources
19		will stabilize electricity prices for Washington residents, provide economic benefits for Washington counties and farmers, create
20		high-quality jobs in Washington, provide opportunities for training
21		apprentice workers in the renewable energy field, protect clean air and water, and position Washington state as a national leader in
22		clean energy technologies."
	RCW 19.285	.020.
23	Finally, the Projects are consistent with the State's findings that it is in the public interest	
24	to "[e]ncoura	ge private investment in renewable energy resources" and "[e]nhance the continued
25	diversificatio	n of the energy resources used in this state." RCW 80.60.005. The Projects are
26	consistent wi	th this policy because they would be funded by private money, with an estimated

total cost of \$40 to \$50 million, which should stimulate economic growth and would diversify energy resources by increasing the availability of solar power.

EFSEC has previously found that these mandates and polices alone demonstrate that wind energy generation facilities are essential and desirable, and implement the public benefit and need for increased renewable energy projects. Today, the current pressing need to address climate change impacts, the declining interest in new fossil fuel generation facilities, competitive pricing of renewable energy generation, and the rising demands of major customer choice for renewable energy within utility service areas have pushed Washington and the region to a much enhanced obligation to reduce reliance on high carbon-emitting energy generation resources, and toward an abundance of renewable energy facilities that are diverse in geography and in "fuel" source. Just a few very current examples include the following:

Colstrip Retirement: Following on the March 17, 2016 WUTC approval of PSE's petition to implement a strategy to retire Colstrip Units 1 and 2, on December 6, 2017, the WUTC approved a settlement to establish a financing mechanism for the decommissioning and remediation needed after the shut-down of PSE's coal-fired Colstrip Units 1 and 2. Colstrip supplies around 20% of the power for PSE's customers. The shut-down is scheduled for July 2022 at the latest. The settlement also sets aside funding to pay for shut-down and cleanup costs for Units 3 and 4 at Colstrip, although no shut-down dates have been established for those newer units.³

PSE's Green Direct Program: According to PSE's newsroom information, "PSE is teaming up with cities, government institutions and major commercial customers to provide them with renewable energy. It's a ground-breaking product where customers, in an effort to use energy that meets their financial and carbon reduction goals, have agreed to a long-term service agreement in order to make this project viable." (April 18, 2017). This program is above and beyond PSE's RPS commitments, and is intended to bolster its renewable generation resources in order to sell clean energy "direct" to commercial, industrial and municipal entities.⁴

³ <u>https://pse.com/aboutpse/PseNewsroom/NewsReleases/Pages/Settlement-reached-in-PSE-general-rate-case.aspx</u>

<u>Coalition Supporting Major Expansion of Solar PV Facilities</u> : Solar Plus is a region	IIuI
effort led by a broad coalition of stakeholders that are working towards tripling the amount	of
solar energy installed in Washington and Oregon by 2019. The Solar Plus project brings	
ogether agencies and organizations representing utilities, environmental justice, renewable	
energy advocates, government, and the solar industry. While the role and participation of u	tility
participants is not identical and is evolving, project members plan to collaborate to develop	and
mplement strategies that enhance solar adoption as well as to build energy equity and resili	iency.
This coalition includes several of Washington's largest utilities, including PSE, Seattle City	7
Light, Snohomish PUD and Avista, along with state agencies, including the WUTC and	
Department of Commerce. (2017). ⁵	
Not detrimental or injurious to the environment	
As discussed in detail in the ASC and the State Environmental Policy Act ("SEPA")
Environmental Checklist, the Projects would have minimal effects on the surrounding	
environment. First, to demonstrate that the projects would not have a detrimental effect on	soils
ΓUUSSO completed a geologic study and mapped soils at the Project sites. See ASC, Chap	<u>oter</u>
3.1; Appendices G-4, H-4, I-4, J-4, K-4 (Geotechnical Engineering Studies). Because the I	Projec
sites are relatively flat, the risk of erosion is low. In addition, best management practices	
"("BMPs") would be employed during construction to control and reduce erosion.	
TUUSSO also demonstrated that there would be no impacts to water resources. See	?
ASC, Chapter 3.3. To protect against impacts to water resources, TUUSSO delineated stre	ams
and other water types at the Project sites and then used avoidance measures in project desig	ın.
Minimum protection buffers would also be used to ensure that water resources are not impa	acted.
ΓUUSSO also prepared drainage reports for each Project site and conducted hydrologic	
modeling to ensure that surface waters would not be impacted. See ASC, Appendices G-5,	H-5,
1-5, J-5, K-5 (Drainage Reports). TUUSSO would implement stormwater BMPs to control	
runoff from the Project sites.	
Similar analysis was undertaken for wetlands. See ASC, Chapter 3.5. Biologists	
conducted field visits and prepared Critical Areas Wetland and Waters Delineation Reports	for
(1-5, J-5, K-5 (Drainage Reports). TUUSSO would implement stormwater BMPs to control runoff from the Project sites. Similar analysis was undertaken for wetlands. See ASC, Chapter 3.5. Biologists	

APPLICANT'S LEGAL MEMORANDUM RE LAND USE - 6

1	each Project site. See ASC, Appendices G-1, H-1, I-1, J-1, K-1. Project design avoidance
2	measures were undertaken to prevent impacts to wetlands. With the exception of the Typha site,
3	no impacts are proposed to any wetlands at the Project sites. The Typha site has one proposed
4	wetland crossing, which would impact less than 0.1 acre of wetland.
	TUUSSO further demonstrated that there will not be a substantial impact to habitat,
5	vegetation, fish, or wildlife. See ASC, Appendix C (Habitat, Vegetation, Fish, and Wildlife
6	Assessment Report). TUUSSO coordinated site visits with Washington Department of Fish and
7	Wildlife ("WDFW") staff, and completed natural resources field surveys from April 3 to 12,
8	2017, to document flora and fauna in the vicinity of the Project sites. No special-status plant
9	species are known to occur within the Project site areas. The Projects have the potential to affect
10	two special-status animal species: the bald eagle and Columbia spotted frog. No bald eagles
	nests have been identified near the Project sites. However, if construction may occur during the
11	bald eagle's critical use period, local U.S. Fish and Wildlife Service biologists would be
12	consulted. To avoid impacts to the spotted frog, setback distances from aquatic habitats would
13	be incorporated into site layouts, and appropriate erosion and sediment control measures would
14	be implemented.
15	TUUSSO's in-depth evaluation of potential impacts to all aspects of the environment,
16	summarized in detail in the ASC, demonstrate that the Projects will not be detrimental to the
17	environment.
	Not detrimental or injurious to the character of the surrounding neighborhood
18	Webster's dictionary defines detrimental as "causing damage or injury; obviously
19	harmful." Neighborhood character might be described as 'the look and feel' of an area. The
20	Projects would not be harmful to the 'look and feel' of the surrounding neighborhood for the
21	following reasons:
22	 the Projects would not substantially change visual landscape of the surrounding area;
23	• the Projects would not constrain or otherwise negatively affect neighboring agricultural
	operations; and
24	• the Projects would not result in the permanent conversion of agricultural land.
25	

<u>Visual Landscape</u>. The Projects would not have a substantial impact on the visual landscape, and therefore would not compromise the look of the area. At maximum height, the solar panels would not exceed 8 feet from grade. In addition, the solar panels would be designed to absorb the maximum amount of sunlight hitting the panel (two-thirds of sunlight hitting the panels is absorbed). Each Project would be secured using 6- to 8-foot-high perimeter fencing. To lessen the visual impact of fencing for neighbors, the Projects would be landscaped at the perimeters with trees and shrubs.

In an effort to objectively and systematically evaluate the visual effect of the proposed Projects, TUUSSO applied the U.S. Bureau of Land Management's Visual Resource System. As explained in detail at ASC, Appendix D (Visual/Aesthetic Assessment Report), the Visual Resource System identifies "key observation points" ("KOPs") that represent views that an array of users would see, with the focus on the views of sensitive viewers. Sensitive viewers include those living or working in the area, travelers along major transportation routes, and recreational users of public lands.

To complete the visual analysis, TUUSSO identified three KOPs for each of the Project sites, collected field data at the KOPs (including panoramic photographs), and then superimposed digital renderings on the KOPs photographs. *See* <u>ASC, Appendix D</u> (containing original and digitally altered panoramic photos). To evaluate the degree of contrast between the existing environment and the environment after the Projects are constructed, the elements of "form," "line," "color," and "texture" were compared in the original panoramic photos and the digitally altered photos. Worksheets were used to rate the contrast in form, line, color, and texture between the current and proposed viewsheds.

Although ratings varied, the visual contrast of the Project sites (as digitally rendered) and the Project sites in their current state was generally rated as weak or moderate. Generally, the comparison photos showed that the Projects would not dominate the view, block current view, or change the characteristic landscape. At certain KOPs, where there was a stronger visual contrast between the Project and the existing land use, TUUSSO has proposed vegetative screening to interrupt the line of sight from the KOP to the Project site. For example, the Penstemon site is a roughly square-shaped site, bordered to the east by a creek and an existing line of trees, and to the south and west by fields. A road, Tjossem Road, forms the north border of the site.

APPLICANT'S LEGAL MEMORANDUM RE LAND USE - 8

TUUSSO would plant a line of trees and shrubs up to 15 feet in height along the north and west borders of the site, between the Project fence and the road, to interrupt the line of site between travelers along the road and the fence. See ASC, Chapter 2.3.3.3. As described in the Vegetation Monitoring Plan, tree and shrub species would be planted in sufficient quantity and density to establish a visual buffer within five years. See ASC, Appendix B.

Neighboring Agriculture. The Projects would not negatively impact surrounding farming operations, and would in no way cause or force the conversion to non-farming land uses. Rather than harming neighboring agricultural production, the Projects would help prevent the spread of noxious weeds, including remedying existing weed problems on several of the Project sites. As discussed in depth in the Vegetation Management Plan (ASC, Appendix B), the Projects would be revegetated after construction. Per the recommendation of WDFW, each of the Project sites (except for Fumaria, which has limited water) would be revegetated with low-cover native plant species (or other approved species agreed in consultation with WDFW and affected landowners). To effectively establish the new plant species, mowing, herbicide treatments, tilling, drilling seeds, and irrigation would likely be undertaken during the initial years of operation. Subsequent broadleaf treatments would be undertaken to prevent broadleaf weeds from competing against newly planted vegetation. In field studies completed this year, eleven species of noxious weeds were discovered at the Project sites. Each Project site contained some presence of noxious weeds; the prevalence of noxious weeds ranged from low to medium. TUUSSO's proposed revegetation and post-construction weed management would help reduce the spread of noxious weeds to neighboring agricultural operations.

No Permanent Conversion of Agriculture Land. Finally, the removal of Project sites from agricultural production would be limited to the expected 30-year life of the Projects. The Projects would be constructed, operated, and decommissioned in such a way as to protect the viability of the land for agricultural use after decommissioning. Initially, the solar panels would be installed via post-and-frame systems that could be removed with minimal disturbance. The Projects sites are also relatively flat and therefore require minimal grading. After installation, the Project sites would be revegetated to prevent the erosion of valuable topsoil. For those reasons, the leased properties used to site the Projects would be readily available for agricultural production upon removal of the solar panels at the end of the Projects' life.

APPLICANT'S LEGAL MEMORANDUM RE LAND USE - 9

1 2	Criteria 2.	The proposed use at the proposed location will not be unreasonably detrimental to the economic welfare of the county and that it will not create excessive public cost for facilities and services by finding that:
3	•	(a) The proposed use will be adequately serviced by existing facilities such as highways, roads, police and fire protection, irrigation and
5		 drainage structures, refuse disposal, water and sewers, and schools; or (b) The applicant shall provide such facilities; or (c) The proposed use will be of sufficient economic benefit to offset
6		additional public costs or economic detriment. KCC 17.60A.015(2).
7	The P	rojects would not be detrimental to the economic welfare of Kittitas County or
8	create excess	ive public costs. Rather, the Projects would benefit Kittitas County's economy.
9	During peak	construction, the Projects would employ up to 100 workers per day. Approximately
10	80 percent of	the peak construction workforce is expected to be hired locally. Such employment
11	·	increase local spending.
12	•	er, the Projects would provide an estimated \$4,880,000 in property tax revenues for
13	Kittitas County over the 30-year life of the Projects. This positive tax impact would help expand	
	local services in Kittitas County. The Projects would also provide consistent revenue to the	
14		f the leased Project sites, thereby aiding agricultural landowners in weathering
15		tet and weather events.
16		y, existing services would adequately serve the Projects with no anticipated
17	_	apacts to police, fire, school, irrigation, refuse, water or septic systems, or health
18		Regarding road use, the Projects are expected to have no or minimal impacts on
19	•	tion system. TUUSSO would make facilities available at the Projects to address
20	-	n and protection. The proposed use complies with relevant development standards and criteria
21	Criteria 3.	for approval set forth in this title or other applicable provisions of Kittitas County Code. KCC 17.60A.015(3).
22	TUUS	SSO is Washington developer of ground-mounted solar power projects with a
23		y of successful low-impact development of over 100 MW of solar projects.
24	TUUSSO would comply with all relevant development standards and criteria in the Kittitas	
25	County Code, including low impact construction and operation and best management practices,	
26	as well as:	

1	KCC Title 8 Health, Welfare, and Sanitation
2	KCC Title 9 Public Peace, Safety, and Morals
	KCC Title 10 Vehicles and Traffic KCC Title 12 Roads and Bridges
3	KCC Title 12 Roads and Bridges KCC Title 13 Water and Sewers
4	KCC Title 14 Buildings and Construction
	KCC Title 15 Environmental Policy
5	KCC Title 17 Zoning
6	KCC Title 17A Critical Areas
	KCC Title 20 Fire and Life Safety
7 8	Criteria 4. The proposed use will mitigate material impacts of the development, whether environmental or otherwise. KCC 17.60A.015(4).
9	As discussed in detail in the SEPA Environmental Checklist, the Projects would mitigat
10	potential impacts through the mitigation plan and measures. The full scope of mitigation
11	measures that would be employed at the Project sites is outlined at ASC, Chapter 1.10.
12	TUUSSO is committed to developing well-sited, well-constructed projects.
13	
14	Criteria 5. The proposed use will ensure compatibility with existing neighboring land uses.
15	
	Webster's dictionary defines "compatible" as "able to exist together without trouble or
16	conflict." Because the Projects would have negligible glare, auditory, and traffic impacts, and
17	for the reasons discussed for Criteria 1, the Projects would ensure compatibility with existing
18	neighboring uses.
19	First, the Projects would not cause substantial glare. See ASC, Appendix E (Solar Glare
	Hazard Analysis Report). The Projects are designed to absorb sunlight, with an anti-reflective
20	layer to maximize solar absorption, so that only one-third of the sunlight reaching the surface of
21	the solar panel has the opportunity to be reflected. The U.S. Air Force has studied glare impact
22	from flat-panel solar projects to airports, and determined such glare is similar to "weathered
23	white concrete" and poses minimal risk.
24	The Projects would also create minimal noise. See ASC, Chapter 4.1.1-4.1.5. During
25	operation, the Projects would be completely silent at night. During the daytime, the operational
26	noise levels for most of the Projects are estimated to be within permissible levels. The noise

1	levels for one Project, the Camas Project, are estimated to be above permissible levels at the
2	property boundary. However, noise levels at the Camas Project's nearest sensitive receptor,
3	which is a commercial facility located 155 feet from the property boundary, are all estimated to
4	be within permissible levels. TUUSSO has committed to post-construction monitoring and
5	mitigation to ensure that noise impacts at all Projects, including the Camas Project, are not
	significant. If necessary, mitigation may include a noise barrier.
6	Finally, regarding road use, access to the Project sites during construction would result in
7	less than a 5 percent increase in average daily traffic ("ADT") volumes on area interstates,
8	highways, and county roads accessing those sites. The exception would be three county roads
9	accessing the Fumaria Project site, with ADT increases on Clarke Road (37.88 percent), Faust
10	Road (12.44 percent), and Hungry Junction Road (9.23 percent). However, that traffic increase
11	would only be for the 3-month period of construction. During operation, the Projects would
	have no negative impact on traffic.
12	
13	Criteria 6. The proposed use is consistent with the intent and character of the zoning district in which it is located.
14	
15	The purpose and intent of the A-20 and CA zones are to "preserve fertile farmland from
16	encroachment by nonagricultural land uses" and "protect the rights and traditions of those
17	engaged in agriculture." KCC 17.29.010; KCC 17.31.010. Kittitas County authorized major
18	alternative energy facilities as conditionally permitted uses in the A-20 and CA Agriculture
	zones. KCC 17.61.020(4) states:
19	Major alternative energy facilities may be authorized in the Agriculture-20, forest and range, commercial agriculture, and
20	commercial zones as follows:
21	b. All other major alternative energy facilities may be authorized
22	as a conditional use.
23	By adopting KCC 17.61.020(4), Kittitas County acted through its land use planning
24	process to determine that solar facilities may be consistent with A-20 and CA zones, depending
25	on project- and location-specific considerations. Other uses that are conditionally permitted in
26	the A-20 and CA zones include airports, shooting ranges, refuse disposal and recycling centers,

1	warehouse and distribution centers, mining and excavation, and utilities. KCC 17.15.050.1;
2	KCC 17.15.060.1. Like major alternative energy facilities, the other identified conditional uses
3	may be "consistent with the intent and character" of the A-20 and CA zones depending on the
4	specific characteristics of individual projects.
	It is important to emphasize that a conditional use is an allowed use. Whereas some uses
5	are prohibited in the A-20 and CA zones (e.g., forest product sales, wastewater treatment), major
6	alternative energy facilities are allowed subject to conditional use review. A leading case
7	explains conditional uses as follows:
8	[Conditional uses] are designed to meet the problem which arises where certain uses, although generally compatible with the basic
9	use classification of a particular zone, should not be permitted to
10	be located as a matter of right in every area included within the zone because of hazards inherent in the use itself or special
11	problems which its proposed location may present. By this device, certain uses (e.g., gasoline service stations, electric substations,
12	hospitals, schools, churches, country clubs, and the like) which may be considered essentially desirable to the community, but
13	which should not be authorized generally in a particular zone
14	because of considerations such as current and anticipated traffic congestion, population density, noise, effect on adjoining land
15	values, or other considerations involving public health, safety, or general welfare, may be permitted upon a proposed site <i>depending</i>
16	upon the facts and circumstances of the particular case.6
17	In this case, there are no hazards inherent in the Projects themselves or special problems
18	with the proposed Project sites that make the Projects inconsistent with the A-20 and CA zones.
19	As discussed previously, TUUSSO undertook a thorough site-selection process to identify the
20	Project sites. The Project site areas are generally sparsely populated. To mitigate possible visua
21	impacts for viewers who live, work, or travel by the Project sites, TUUSSO has proposed to
22	
23	⁶ Zylka v. City of Crystal, 283 Minn. 192, 195, 167 N.W.2d 45 (1969) (internal quotation marks and footnote omitted) (emphasis added). Although a Minnesota Supreme Court decision,
24	the Zylka opinion was described in a Washington land use treatise as "one of the best discussions
25	distinguishing conditional uses from variances," 17 Wash. Prac., Real Estate § 4.22 n. 3, and habeen cited with approval by multiple Washington courts, see State ex rel. Standard Mining &
26	Dev. Corp. v. City of Auburn, 82 Wn.2d 321, 327 n. 3 (1973).

plant lines of trees and shrubs along Project borders. The Projects would not otherwise have any negative impacts on surrounding land uses.

In addition, the Projects are consistent with the A-20 and CA zones because they preserve agricultural farmland from permanent encroachment by other non-agricultural uses, such as low-density residential sprawl. Unlike other conditional uses permitted in the A-20 and CA zones, the Projects would not permanently remove any farmland from production. Once the Projects are decommissioned, all equipment and materials would be removed. Because of the minimal disturbances to the top soils, the lands would be readily utilized for their former or new agricultural uses. Likewise, the Projects in no way discourage or cause interference with adjacent agricultural uses. The Projects provide added financial security for owners of agricultural land who desire to temporarily lease their property for Project sites. In that way, the Projects "protect the rights" of those engaged in agriculture and are consistent with the A-20 and Commercial Agricultural zones.

Criteria 7. For conditional uses outside of Urban Growth Areas, the proposed use:

a. Is consistent with the intent, goals, policies, and objectives of the Kittitas County Comprehensive Plan, including the policies of Chapter 8, Rural and Resource Lands;

Pursuant to Washington's Growth Management Act, a comprehensive plan serves as a county's "generalized coordinated land use policy statement." RCW 36.70A.030(4). Local development regulations, such as zoning codes, carry out the comprehensive plan's policies and must be consistent with the those policies. The Washington Supreme Court has explained that, "[i]f a zoning code explicitly requires that all proposed uses comply with a comprehensive plan, then the proposed use must comply with both the zoning code and the comprehensive plan." However, because a comprehensive plan is not a document designed for making specific land

⁷ Woods v. Kittitas County, 162 Wn.2d 597, 613 (2007); see also RCW 36.70B.040 (Local development regulations "must be consistent with and implement the comprehensive plan.").

⁸ Woods, 162 Wn.2d at 614 (2007); Cingular Wireless, LLC v. Thurston County, 131 Wn. App. 756, 770 (2006).

use decisions, the Supreme Court has required that "conflicts between a general comprehensive plan and a specific zoning code be resolved in the zoning code's favor."

The Projects are consistent with the Kittitas County Comprehensive Plan's planning vision and mandates. The Comprehensive Plan specifies land use types and designations. Land in the A-20 zone is classified as a "Rural" land use. Land in the Commercial Agriculture zone is classified as a "Resource" land use. Tables 1 and 2 in Appendix A summarize the GPOs in Chapters 2 (Land Use), 6 (Utilities), and 8 (Rural and Resource Lands) that relate to the lands where the Projects would be located and the Projects generally.

The Kittitas County Comprehensive Plan asks that natural resource industries be enhanced and the local economy diversified while preserving the local rural character. ¹⁰ These Projects, which are low impact natural resource developments, serve these dual goals.

Chapter 2's mandate is clear: "[t]he development of resource based industries and processing should be encouraged *in all areas of Kittitas County*." GPO 2.15. However, "[w]hen such uses are located in rural and resource lands, criteria shall be developed to ensure the protection of these lands to ensure compatibility with rural character." Here, as demonstrated below, the Projects are the rare natural resource developments that, combined with comprehensive and thoughtful mitigation, are compatible with the County's rural character (see below). *See id.* Permitting the construction of solar energy facilities enhances the County's natural resource industry base and, particularly during construction, diversifies and broadens Kittitas County's employment base. *See* GPO 2.2, 2.3; *see also* ASC, Chapter 2.22 (sites to avoid impacts to undisturbed lands). Moreover, the Project locations were chosen, in significant part, to avoid or minimize adverse environmental impacts to critical habitats, including forests, streams and wetlands. *See* GPO 2.4. The 30-year dedication of these lands for use in solar production does not represent a permanent conversion of agricultural lands, which allows the County to reassess land use needs over time. *Id.* Accordingly, the Projects serve Kittitas

⁹ Citizens for Mount Vernon v. City of Mount Vernon, 133 Wn.2d 861, 874 (1997); Cingular Wireless, 131 Wn. App. at 769.

¹⁰ Chapter 2 explains that more than 50 percent of Kittitas County is covered by coniferous forests (mostly designated Commercial Forest), while approximately 30 percent is in pasture or unimproved grazing land. Less than 2 percent of Kittitas County is in urban development.

County's goal to "maintain a flexible balance of land uses which will protect, preserve, and enhance the rural character, historical forest lands, agricultural industries, mineral lands, and high quality environment." GPO 2.7

Chapter 6 addresses utility uses and contemplates the siting and development of solar resources in Kittitas County. GPO 6.36. The Comprehensive Plan also contemplates the timely review of utility-related permits in a way that is complementary to regional energy demands. GPO 6.9, 6.7. During the County's moratorium on the acceptance of applications for solar facilities, TUUSSO seeks expedited review of its proposed solar energy projects from EFSEC to ensure a timely and fair permitting review process. TUUSSO's solar facilities will feed into the PSE electric grid and serve local and regional energy users—from residences to businesses, including agricultural businesses. The development of new, green energy production is complementary to regional energy demands, which now requires renewable sources to reduce the state's carbon footprint.

In furtherance of the County's goal of ensuring adequate public engagement in the review of utility projects, TUUSSO implemented an intentional and far reaching outreach campaign to parcels directly affected by the Projects, local government officials and staff, Native American Tribes, and community groups. *See* GPO 6.10.

Finally, the Projects are consistent with the policies set out in Chapter 8 of the Comprehensive Plan, which apply to Rural and Resource Lands. Consistent with Kittitas County's code, which permits major solar facilities in rural areas, the Chapter does not contemplate an absence of development or natural resource-based facilities. GPO 8.5, 8.9, 8.16. Rather, Chapter 8 contemplates mixed use development and sets forth the goal of reducing the impact of development and preserving adjacent resource lands, including agricultural lands. *See* GPO 8.8 ("A certain level of mixed uses in rural areas and rural service centers is acceptable and may include limited commercial, service, and rural industrial uses."), 8.9; Comprehensive Plan at 8-3 ("Kittitas County's rural land use designation consists of a balance of differing natural features, landscape types, and land uses. Rural land uses consist of dispersed and clustered

¹¹ The County's moratorium on the acceptance of solar facility applications prevents TUUSSO (and the County) from review permits at this time as contemplated in GPO 6.23.

1	residential developments, farms, ranches, wooded lots, and agricultural and
2	recreational/commercial and industrial uses that serve local and national and international
3	populations as customers."). Indeed, a specific attribute identified by Kittitas County residents
	as emblematic of "rural character" is "development away from urban areas." Comprehensive
4	Plan at 8-4. Consistent with this goal, Kittitas County identifies "[p]rovid[ing] rural economic
5	opportunity" as a goal of Chapter 8. Comprehensive Plan at 8-7.
6	TUUSSO's solar projects are a low-impact natural resource economic opportunity that do
7	not require enhanced services and in no way inhibit or interfere with the function or use of
8	adjacent agricultural resources. See GPO 8.1, 8.4, 8.8. Indeed, the Projects harvest a different
9	type of crop—solar energy. Because solar development is a permitted use on applicable zoning
10	districts, the Projects also support the County's interests in intentionally siting such
	developments. See GPO 8.3. And, as the leasing of land for the development of these solar
11	resources supplements the incomes of local farmers, the 30-year use of these lands for energy
12	production furthers the County's "right" and not obligation "to farm." GPO 8.11.
13	Finally, the Projects have no direct impacts to water resources and avoid impacts to
14	buffers to the extent feasible. See GPO 8.14C, 8.21B. Where impacts are unavoidable
15	(estimated to be 0.39 acres impact across all five projects), TUUSSO will implement best
16	management practices to minimize adverse impacts and will fully mitigate impacts consistent
17	with regulatory requirements. Fencing and vegetation screening will also be used to avoid and
	reduce the potential for aesthetic impacts to adjacent agricultural uses. See GPO 8.44. To the
18	extent that the Kittitas County Comprehensive Plan encourages agricultural uses in areas zoned
19	as rural, these provisions must be harmonized with provisions encouraging low impact natural
20	resources development. Compare GPO 8.16 with 2.15. The siting of a low impact solar
21	development in the proposed rural areas is an appropriate balance of these provisions.
22	b. Preserves "rural character" as defined in the Growth Management Act (RCW 36.70A.030(16));
23	The Growth Management Act defines "rural character" based on the "patterns of land use
24	and development established by a county in the rural element of its comprehensive plan:"
25	(a) In which open space, the natural landscape, and vegetation predominate over the built environment;
20	predominate over the built environment,

1	(b) That foster traditional rural lifestyles, rural-based economies,
2	and opportunities to both live and work in rural areas;
2	(c) That provide visual landscapes that are traditionally found in
3	rural areas and communities; (d) That are compatible with the use of the land by wildlife and for
4	fish and wildlife habitat;
4	(e) That reduce the inappropriate conversion of undeveloped land
5	into sprawling, low-density development;
6	(f) That generally do not require the extension of urban
6	governmental services; and
7	(g) That are consistent with the protection of natural surface water flows and groundwater and surface water recharge and
8	discharge areas.
o	dibelial for director.
9	RCW 36.70A.030(16) (emphasis added).
10	As specified RCW 36.70A.030, the Growth Management Act's definition of "rural
11	character" is intended to guide a county's development of "the rural element of its
	comprehensive plan." Thus, the inclusion of the statutory definition of "rural character" in
12	Kittitas County's conditional use criteria invites somewhat circular reasoning. Kittitas County's
13	conditional use criteria direct readers to the Growth Management Act, which is intended to guide
14	
	development of the comprehensive plan, which is intended to guide development of the zoning
15	code.
16	It should be emphasized that conditional use review must be standards-based. 13
17	Standards are necessary to protect the project applicant from arbitrary action, prevent
	discrimination, and facilitate judicial review. ¹⁴ Standardless conditional use criteria defeat the
18	objective evaluation of project impacts, and disable the conditioning of projects to achieve
19	
20	The Growth Management Act requires that counties' comprehensive plans include
	provisions that protect rural areas, stating in relevant part that, "[t]he rural element shall include
21	measures that apply to rural development and protect the rural character of the area[.]" Id.;
22	RCW 36.70A.070(5)(c) (emphasis added); see also Suquamish Tribe v. Cent. Puget Sound
	Growth Mgmt. Hearings Bd., 156 Wn. App. 743, 770 (2010) (county's comprehensive plan
23	challenged for failure to preserve rural character).
24	The courts have explained that, while counties "have very broad legislative powers when they adopt or amend zoning classifications, the authority to issue special permits must be
	controlled by adequate standards " Evergreen State Builders, Inc. v. Pierce County, 9 Wn.
25	App. 973, 976 (1973).
26	¹⁴ See State ex. rel. Standard Mining & Dev. Corp. v. City of Auburn, 82 Wn.2d 321, 327, 510 P.2d 647 (1973).
	JIVI 1.44 UTI (IJIJ)

compliance with conditional criteria. The Washington Supreme Court has previously explained, "the regulation of land use must proceed under an express written code and not be based on ad hoc unwritten rules so vague that a person of common intelligence must guess at the law's meaning and application."¹⁵ Thus, it is important that "rural character" not be used as a proxy for subjective opinions concerning whether a project is considered aesthetically objectionable.

Notwithstanding potential for subjectivity and the circular nature of this standard, the Projects "preserv[e] 'rural character" by demonstrating consistency with Chapter 8 of Kittitas County's Comprehensive Plan—which is required by statute to protect the "rural character" of Kittitas County's rural element. The Projects maintain natural landscapes, open space, and the visual landscape. See RCW 36.70A.030(16)(a). The panels are quiet, unobtrusive structures with very few moving parts and minimal maintenance requirements that would not significantly impact viewsheds. The panels would have native or other compatible vegetation planted under them, subject to consultation with WDFW and surrounding landowners, and would be surrounded by native habitat, including native plants, where possible. The Projects would also be compatible with current rural uses of the land. The Projects would not impact traditional rural lifestyles, rural-based economies, or opportunities to live and work in rural areas. See RCW 36.70A.030(16)(b). Local farming practices can (and would) continue on the properties adjacent to the Projects. The Projects would not in any way interfere with existing, surrounding agricultural practices and would not force or compel any conversions to non-agricultural land uses.

The Projects would not substantially impact the current visual landscape at the Project sites. See RCW 36.70A.030(16)(c). As described in the Visual/Aesthetic Impact Report, the areas surrounding the Project sites generally consist of scattered houses and farm buildings, flat agricultural fields, irrigation ditches, county roads and major highways. See ASC, Appendix D. Additional elements present at individual Project sites include: signs, utility poles, industrial buildings, scattered trees, overhead irrigation sprinklers, metal gates, and wire fences. In the background, there are rolling hills and distant peaks. TUUSSO utilized the U.S. Bureau of Land

 ²⁵ Lity of Seattle v. Crispin, 149 Wn.2d 896, 905, 71 P.3d 208 (2003), as amended on denial of reconsideration (Sept. 2, 2003) (citing Burien Bark Supply v. King County, 106 Wn.2d 868, 725 P.2d 994 (1986)).

1	Management's Visual Resource System to complete an objective evaluation of visual impacts of
2	the proposed Projects. That analysis demonstrates that the visual contrast of the proposed
3	Projects to the current Project sites would be weak or moderate. Specifically, due to the low-
4	lying nature of the solar panels, the Projects would not interfere with current views and would be
	less visible at a distance. Moreover, the solar panels would not dominate the view. Finally,
5	TUUSSO would use vegetative screening to lessen the contrast to surrounding areas.
6	The Projects would inhibit the conversion of undeveloped lands into sprawling residential
7	developments. Given this, the Projects help advance the Growth Management Act mandate that
8	expands economic use of rural areas and strongly discourages and prohibits conversions of rural
9	lands to low-density residential developments. See RCW 36.70A.030(16)(e). In sum, the
10	Projects would be temporary and provide an opportunity for diversified farming income that
11	would reduce incentives for low-density residential development. Finally, as discussed in (c)
	immediately below, the Projects would not require the extension of urban governmental services
12	See RCW 36.70A.030(16)(f).
13	The Projects would also be compatible with local wildlife habitat. See RCW
14	36.70A.030(16)(d). TUUSSO will continue to work with the Washington Department of Fish
15	and Wildlife to manage existing wildlife habitat. In addition, the Projects will maintain current
16	patterns of surface water and groundwater flow and recharge and discharge areas, as well as
17	surface water and groundwater uses. See RCW 36.70A.030(16)(g). The Projects are anticipated
	to have no stormwater discharges and would use water under existing water allocations or water
18	that is trucked in.
19	
20	
21	
22	
23	
24	
25	
26	

1	c. Requires only rural government services; and		
2	The Projects would require only rural government services, such as police and fire		
3	services. The Projects would have on-site fire prevention and protection measures. In addition,		
4	with minor improvements, the roads and infrastructure would be sufficient to serve the Project's		
5	construction and operation. As mitigated, the Projects would not increase the need for police,		
6	fire, school, irrigation, refuse, water or septic systems, or health care services, and there would		
7	be no costs or detriments to offset.		
8	d. Does not compromise the long term viability of designated resource lands.		
9	Designated resource lands within Kittitas County include Commercial Agriculture,		
10	Commercial Forested, and Mineral lands. Kittitas County has designated roughly 357,527 acres		
11	as Commercial Agricultural land based on the long-term agricultural commercial significance of		
12	those lands. Three of the Projects, Camas, Penstemon, and Typha, would be located on		
13	Commercial Agriculture land. These Projects comprise roughly 0.05 percent of the total		
14	Commercial Agriculture lands in Kittitas County. As discussed previously, the Projects would		
	not cause the permanent removal of lands from agricultural use. Upon decommissioning, the		
15	lands would be returned to their original state and able to be returned to agricultural production.		
16	For that reason, the Projects would not compromise the long-term viability of Commercial		
17	Agriculture lands.

Appendix A. Kittitas County Comprehensive Plan GPOs.

Table 1. Kittitas County Comprehensive Plan GPO General Policy Statements

GPO Number General Policy Statements		
2.2	Protect, preserve, maintain, and enhance the County's natural resource industry base, natural environment, and rural character, including but not limited to timber, agriculture, mineral, water and energy resources. The County shall avoid land use conflicts with its resource industry by applying low residential densities to lands adjacent to resource lands.	
2.3	The County should diversify economic development by providing broader employment opportunities.	
2.4	Encourage urban growth and development in those areas where public roads and services can support such growth, and where development will cause minimal environmental degradation, reduce the conversion of land for development, and concentrate future growth in established cities and urban growth areas.	
2.7	Kittitas County will maintain a flexible balance of land uses which will protect, preserve, and enhance the rural character, historical forest lands, agricultural industries, mineral lands, and high quality environment.	
2.15	The development of resource based industries and processing should be encouraged in all areas of Kittitas County. When such uses are located in rural and resource lands, criteria shall be developed to ensure the protection of these lands to ensure compatibility with rural character. Consider adding a definition for "resource based industry" to the definitions in Title 17, Zoning.	
6.18	Decisions made regarding utility facilities should be consistent with and complementary to regional demand and resources and should reinforce an interconnected regional distribution network.	
6.36	Develop a study area encompassing the entire county to establish criteria and design standards for the siting of solar farms.	
8.1	Rural lands are characterized by a lower level of services; mixed residential, agricultural and open space uses; broad visual landscapes and parcels of varying sizes, a variety of housing types and small unincorporated communities.	
8.3	The County shall promote the retention of its overall character by establishing zoning classifications that preserve rural character identified to Kittitas County.	
8.4	Development in rural areas is subject to agricultural and forestry activities that may take place as a right on adjacent properties.	
8.8	A certain level of mixed uses in rural areas and rural service centers is acceptable and may include limited commercial, service, and rural industrial uses	
8.11	Policies will reflect a "right to farm" in agricultural lands.	
8.13	Encourage development activities and establish development standards which enhance or result in the preservation of rural lands.	
8.14C	Development shall be located distances from streams, rivers, lakes, wetlands, critical areas determined necessary and as outlined within existing Shorelines Management Program, the Critical Areas Ordinance and other adopted resource ordinances in order to protect ground and surface waters.	
8.15	Uses common in rural areas of Kittitas County enhancing rural character, such as agriculture uses in Lower Kittitas and rural residential uses and recreation uses in Upper Kittitas shall be protected from activities which encumber them.	
8.16	Give preference to land uses in Rural designated areas that are related to agriculture, rural residential development, tourism, outdoor recreation, and other open space activities.	
8.17	Land use development within the Rural area that is not compatible with Kittitas County rural character or agricultural activities as defined in RCW 90.58.065(2)(a) will not be allowed	
8.21	Kittitas County will provide criteria within its zoning code to determine what uses will be permitted within rural zone classifications in order to preserve rural character.	
8.44	Growth and development in Rural lands will be planned to minimize impacts upon adjacent natural resource lands.	
8.129	Encourage development projects whose outcome will be the significant conservation of farmlands.	

Table 2. Kittitas County Comprehensive Plan GPO Zoning Implementation Statements

GPO Number	Zoning Implementation Statements	
6.7	Decisions made by Kittitas County regarding utility facilities will be made in a manner consistent with and complementary to regional demands and resources.	
6.9	Process permits and approvals for all utility facilities in a fair and timely manner, and in accordance with development regulations that ensure predictability and project concurrency.	
6.10	Community input should be solicited prior to county approval of utility facilities, which may significantly impact the surrounding community.	
6.23	Kittitas County reserves the right to review all applications for utilities placed within or through the County for consistency with local policies, laws, custom and culture.	
6.36	Develop a study area encompassing the entire county to establish criteria and design standards for the siting of solar farms.	
8.5	In order to protect and preserve Resource Lands, non-resource development and activities on adjacent Rural lands shall require preservation of adjacent vegetation, existing landforms (e.g. ravines) or use of other methods that provide functional separation from the resource land use.	
8.9	Protecting and preserving resource lands shall be given priority. Proposed development allowed and adjacent to resource lands shall be conditioned to protect resource lands from negative impacts from that development.	
Functional separation and setbacks found necessary for the protection of water resources, rural charvisual compatibility with surrounding rural areas shall be required where development is proposed sentence of this policy shall not apply to agricultural activities as defined in RCW 90.58.065(2(a). by the county shoreline master program or critical area regulations, buffers shall be provided.
