

APPENDIX J: WATER SOURCE DOCUMENTATION

Dave Kobus
Project manager
Horse Heaven Wind Farm

(dave@scoutcleanenergy.com) 1/15/21

With the information you have sent me, we would be willing to haul or transfer water, approx *2,000,000 gal from the Kenwick water station for the wind farm. We have two trucks. The tenders are set up for hauling and dust abatement - 6 sprayers with a top gun. These trucks are 4000 gal each and newer model Peterbilts. (*The estimated gallons of water are for the two projects of solar panels to be cleaned, not knowing the scope of hours required to complete the work, prices would be based on a hourly rate. The ~~rate~~ rate would cover equipment and personal. As a subcontractor we would provide, Ins - Fuel - taxes and other measures necessary for the project.

With our working on past water wind farms the water and soaps are paid for by the owners.

thank you for your consideration
with Wing Air

Sincerely
Wing Air
Kevin Winger
(owner)

our work within Wind Projects have been with RES, WANZEK, Good Fellow Bros, Bonifulpower Lines and substations. WE HAVE Forrest Service contracts for water tenders. I HAVE BEEN IN BUSINESS FOR 35 years and been involved with wind projects since 2007.
