To: The State of Washington Energy Facility Site Evaluation Council (EFSEC)
From: Tetra Tech and Horse Heaven Wind Farm, LLC
Subject: Horse Heaven Wind Farm – Acoustic Model Sound Source Input Data
Date: November 2021

Tetra Tech determined that the acoustic model used to analyze potential Project noise impacts incorrectly applied the 79 dBA sound pressure level as a sound power level for the inverter/transformer block in the model. The acoustic model was revised to reflect the corrected sound power level for the inverter/transformer block and those values shown in the table below.

Revised - Modeled Octave Band Sound Power Level for Solar Equipment

<table>
<thead>
<tr>
<th>Equipment</th>
<th>Octave Band Sound Power Level (dBA) by Frequency (Hz)</th>

</thead>
<tbody>
<tr>
<td></td>
<td>31.5</td>
<td>63</td>
</tr>
<tr>
<td>Inverter/Transformer Block</td>
<td>75</td>
<td>83</td>
</tr>
</tbody>
</table>

In order to assess whether revising the inverter sound source characteristics would affect the acoustic modeling analysis, Tetra Tech re-evaluated Project compliance using the “worst case” Option 1 wind turbine layout employing the GE 2.82 MW wind turbine. The original acoustic modeling results presented in the Application for Site Certification (ASC) are given versus the updated model incorporating the revised inverter sound source characteristics. While some received sound levels at noise sensitive receptors (NSRs) were affected by the incorporation of revised inverter sound source characteristics, compliance with the 50 dBA WAC 173-60 nighttime limit was maintained.

Revised versions of Figures 4.1.1-2, 4.1.1-3, 4.1.1-4, and 4.1.1-5 of the ASC (which display the resulting Operational Received Sound Levels for the Project) as well as a revised Appendix O (i.e., the Acoustic Modeling Results by Noise Sensitive Receptor) have been provided to EFSEC under separate cover.
