I am writing to express my support for the Horse Heaven Clean Energy Center because I believe that it would be a strong and reliable source of renewable power for Washington State. With the passage of the Clean Energy Transformation Act (CETA) in 2019, Washington has made a commitment to reach a 100% clean electricity supply. Projects like the Horse Heaven Clean Energy Center that boast wind, solar, and battery storage capabilities will be necessary investments to reach those CETA goals. The Horse Heaven Clean Energy Center will help Washington set an example for the rest of the nation to follow. Washington residents know that our summers are getting progressively hotter, extreme weather events are becoming more common, and forest fires are creeping into the fall months. Many dismiss this change as 'the new normal'. But this is far from Washington's normal. We must take proactive steps to protect this remarkable place we call home. Washington needs a large-scale clean energy resource to promote a greener future and head off the disastrous effects of climate change. I strongly value the ability to voice my support for these important projects, and I ask you to please consider my comment in making your decision. Joyce Satchell - PO box 2156, 98370

I support the Horse Heaven Clean Energy Center because I support a greener and cleaner future for Washington State. A large-scale clean energy project like the Horse Heaven Clean Energy Center will help Washington reach a carbon-free future and even position our state as a leader for renewable energy. By greenlighting projects like this, Washington can be a change leader, both regionally and nationally, with home-grown power supply solutions. This project will not just help the state as a whole – it will also benefit the local economy by providing over 900 construction jobs and 56 full-time jobs, while generating tax revenue to support public services for the Tri-Cities community. I write you to express my wholehearted support for this project because the benefits, locally and globally, are what we need to sustain a greener future. The state has a responsibility to foster positive environmental impacts, and the Horse Heaven Clean Energy Center can be a key step to making a real difference for the climate. Thank you for considering a greener, cleaner future. CindyKay Webster - 5215 s 3rd ave, 98203

I have grave concern for impacts on soil disruption during the preparation and installation of these massive eye sores. Management of small particle airborne dust is going to be a major issues for all land owners downwind of the 72,000 or so acres of broken ground that the project covers. And the soil erosion that is bound to happen as the ground surrounding the windmills dries out is also going to be a problem for agriculture and wildlife. Likewise, thousands of residents could face adverse health outcomes with compromised air quality due to increased particulates; as well as coping with possible damage to property and exterior machinery/systems for the same reasons. Put these windmills out where nobody lives, about 10 miles south of Badger Canyon. I don't even understand why some people think this is a good idea...

The materials and energy used to make these windmills outweighs the energy they the generate. Most parts of these structures are non-recyclable when they reach the end of their lifespan. Can you please imagine miles of Seattle Space Needles standing in rows on a ridge? The unending noise pollution, and hundreds of feet tall, each lined with blinking red lights, for miles? That alone will destroy the environment for wildlife and landowners alike. These structures are a total waste of materials, resources, land, and tax dollars. A fraud, really. It seems to be purposeful economic destruction.

To whom it may concern, I'm opposed to any and all wind farm projects. They distract from our beautiful vistas and add visual noise. I'm challenging whether they will truly add as much as claimed to the local economy over the proposed timeframe. The timeframe seems long enough that during that period the technology will likely become obsolete ( no longer financially effective as was proposed). Thank you, Concerned resident of Benton County, WA.

The impacts of climate change in the Pacific Northwest are becoming increasingly apparent to those of us lucky enough to call Washington home. Our marine life is under threat. Our forests are struggling. In September, Seattle had the worst air quality in the world due to wildfire smoke. How is the above relate to car emissions?????

Why is an out of state company being allowed to come here and place windmills where they aren't wanted or needed. We don't need the power in our area and our land is being used for more populated cities power. If they need power then put them in their cities. The research for the sound pollution isn't being addressed here. The negative environmental impacts to our area and the native birds aren't being addressed either. This isn't wanted in the Tri Cities.

I am writing to express my support for the Horse Heaven Clean Energy Center and the role it will play in helping Washington achieve the ambitious decarbonization goals we set for ourselves with the passage of the Clean Energy Transformation Act (CETA) in 2019. I believe strongly in impact mitigation and value EFSEC's process, but know that Washington's ability to realize a carbon-free future will depend on permitting large-scale clean energy projects in a timely manner just like the Horse Heaven Clean Energy Center. This is a good project with appropriately identified mitigation measures, and backed by an experienced team that will produce up to 1,150 MW of renewable energy through a combination of wind, solar, and battery storage technology. With the passage of CETA, Washington established itself as a leader in the fight to curb global emissions. The state now has a responsibility to ensure the clean energy transition can be achieved in the necessary timeframe to facilitate fossil plant retirement, and in doing we can set an example for the rest of the nation to follow. Thank you for your consideration. Roger McMullan - 77 S Washington St, 98104

I am writing to express my support for the Horse Heaven Clean Energy Center and the role it will play in helping Washington achieve the ambitious decarbonization goals we set for ourselves with the passage of the Clean Energy Transformation Act (CETA) in 2019. I believe strongly in impact mitigation and value EFSEC's process, but know that Washington's ability to realize a carbon-free future will depend on permitting large-scale clean energy projects in a timely manner just like the Horse Heaven Clean Energy Center. This is a good project with appropriately identified mitigation measures, and backed by an experienced team that will produce up to 1,150 MW of renewable energy through a combination of wind, solar, and battery storage technology. With the passage of CETA, Washington established itself as a leader in the fight to curb global emissions. The state now has a responsibility to ensure the clean energy transition can be achieved in the necessary timeframe to facilitate fossil plant retirement, and in doing we can set an example for the rest of the nation to follow. Thank you for your consideration. Simau Tanuvasa - 9210 S Hosmer St B11, 98444

I object to the wind farm project. I live on the boundary of turbines will be and I know FOR A FACT this will harm wildlife. We constantly have birds of prey that fly over our home all year round including the migration path of the snow geese and the sandhill cranes. With the many turbines that are across the miles they will be definitely be impacted. There is plenty of land to be had that is not in migration path or directly next to a huge sprawling city that you could put this wind farm at that does not impact our towns, farms & migrating animals. If you were to perform a non-influenced study of threats to the animals you would see this would effect eagles, hawks, cranes, geese and more. I am including a photo to show how low they fly. With the incredible height of the turbines that you are proposing they wouldn't have a chance. :(

I support the Horse Heaven Clean Energy Center because I support a greener and cleaner future for Washington State. A large-scale clean energy project like the Horse Heaven Clean Energy Center will help Washington reach a carbon-free future and even position our state as a leader for renewable energy. By greenlighting projects like this, Washington can be a change leader, both regionally and nationally, with home-grown power supply solutions. This project will not just help the state as a whole – it will also benefit the local economy by providing over 900 construction jobs and 56 full-time jobs, while generating tax revenue to support public services for the Tri-Cities community. I write you to express my wholehearted support for this project because the benefits, locally and globally, are what we need to sustain a greener future. The state has a responsibility to foster positive environmental impacts, and the Horse Heaven Clean Energy Center can be a key step to making a real difference for the climate. Thank you for considering a greener, cleaner future. Marlene King - 22212 Pacific Way Ocean Park, 98640

This letter is to inform EFSEC of my support for the Horse Heaven Clean Energy Center. This project would play a key role in helping us meet our state's goal to diminish our reliance on fossil fuels and make a transition to renewable, carbon-free energy. Washington is home to some of the country's leading solar, wind, and hydroelectric facilities. And we should not stop there—I strongly believe this project will act as a pivotal step to achieve our aggressive carbon reduction targets by expanding our clean energy production. Washington has taken an important step forward in the fight against greenhouse gas emissions by passing the Clean Energy Transformation Act. But the challenge ahead is significant. To achieve the objective of phasing out coal-fired power plants, it is our responsibility to respond to the urgency of the climate crisis in the short time we have left. The Horse Heaven Clean Energy Center project can help Washington secure a greener future. I appreciate the opportunity to share my support for the Horse Heaven Clean Energy Center. Kevin Freeman - 6714 114th Ave. Ct. E., 98372

I am pleased to submit this letter to share my support for the Horse Heaven Clean Energy Center. The climate crisis is the defining challenge of our time, and it is imperative that we take action to mitigate its impacts. The Horse Heaven Clean Energy Center would be a crucial step in that direction. If approved, the project will help Washington meet its goals for reducing greenhouse gas emissions and move closer to becoming a carbon-neutral state by 2045. By investing in these large-scale clean energy projects, we can ensure that we meet the increasing energy demands in Washington with renewable sources. This project will have a combination of wind, solar, and battery storage components that will provide long-term energy viability. In addition to reducing carbon emissions, the Horse Heaven Clean Energy Center will also create jobs. The project is estimated to create over 900 construction jobs and 56 full-time jobs once operational. These are good-paying jobs that will have a positive economic impact on the communities in the Tri-Cities region. Once the project is completed, it will also generate millions in public revenue that could fund public safety and education. Washington has a responsibility to do its part by setting an aggressive timeline for retiring fossil fuel-powered plants, as well as permitting replacement power resources in a timely manner. The Horse Heaven Clean Energy Center will deliver substantial job growth and local economic development while reducing our state's reliance on fossil fuels and set us on a path to a cleaner, healthier future for all. I encourage you to consider these comments. Thank you for your time. Moureen Ballard - 5710 sw Daisy Street Port Orchard, WA, 98367

Big concerns are the wildlife kill, especially the raptors which soar the ridges. This wind farm proposal will most likely decimate the raptors with no opportunity to recover as the windmills will always be there taking their toll. The studies on the height and number of blades seems inconclusive. The right number of blades is 0 to protect our fragile environment and wildlife. The noise generated by the windmills has not been studied as the location has not been determined. These are incredible noise generators with the impact on human and animal health has not been determined. 20 year life is laughable. My understanding is that is the life a wind turbine with little to no recycling capability. How are these going to be disposed?

I'm very concerned about the impact to the natural habitat for wildlife in the Horse Heaven Hills area. We all know about the noise caused by the turbine blades, we know the blades kill birds (some protected species), leaking oil/airborne blades, and we all know that so many of these monstrosities AREN'T BEING RECYCLED! In this day and age, why? We don't need more items that need to be buried in our soil. Hydroelectric power is so efficient and they've found ways to protect fish migration. We need more ways to protect our environment instead of sabotaging it with more things that can't be recycled.  
<https://www.bloomberg.com/news/features/2020-02-05/wind-turbine-blades-can-t-be-recycled-so-they-re-piling-up-in-landfills?leadSource=uverify%20wall> ... also ... <https://projects.oregonlive.com/wind-farms/>

My name is Shane Schmidt and I live near this proposed project. I am concerned of the negative impacts of the project. There will be definite negative impacts to the wildlife from the construction and operation of the wind turbines. The increased noise, heavy equipment and permanent impact to the land and view even after the turbines life ends, the concrete foundations will be permanent fixtures and make so much of the land unreclaimable. The red lights and vibration will be a detriment to the area, not an asset. Plus the electrical generation will not even be used here. Let the communities that want the power construct electricity generation projects in there area and leave our hills alone

This wind farm will be located upwind from my home. The risk of wildfires from the construction and operation of the windmills is too high. We had 7 houses lost due to a wildfire several years ago in Canyon Lakes, and fortunately no injuries. Furthermore, I cannot tolerate dust and pollutants these windmills will create. People with breathing problems will suffer.

I am extremely concerned about this wind Turbine project as a member of the Kennewick community. I'm concerned about the impact on the environment and animal habitat. I'm concerned about the views of our beautiful Horse Heaven Hills. I'm concerned about how big and tall and close to our city and houses that these wind turbines will be. I'm concerned about the blinking red lights and potential change in environmental factors. Why can't these turbines be farther away from the city? There is plenty of empty land farther south of Tri Cities.

I generally support the proposed Horse Heaven Hills energy project. However, I would like to encourage EFSEC to require the following as part of mitigation. These are in no particular order as I was too tired to read the lengthy EIS. Fund the equipment to help dryland wheat farms do direct seeding and no-till farming. The dust is horrible and they have not been good stewards or seriously worked on dust control. The money that comes from this project could address that. If they don't have to be on the same sequence, please have the lights on the turbines blink randomly - There are places in the Gorge where they go on and off in a line - light then dark. It's really annoying. Avoid damaging intact shrub-steppe habitat and work around it when possible Replanting efforts should have a 3-5 year bond to ensure plant success. Use best available technology to limit bird and bat strikes. I recently heard black blades would be better for birds to see. Hopefully the data will be available in time for these. Require Scout to simultaneously fund an energy conservation campaign. We need to conserve the energy we have. Ensure Scout pays a fair price for land leases. The leases could help provide a stable income so farmers can keep farming in the face of climate impacts. Also, whatever role EFSEC has in the matter, it is time to remove the four lower Snake River dams to prevent ecocide and cultural genocide.

Interesting that the faction that bellyaches about interference with property rights wants to interfere with farmland owners' right to use their land to both farm and produce clean energy. Could it be that the wind farm would slow the southward sprawl of oversized homes? The energy produced from wind would enhance our regional focus on energy that doesn't affect climate change. Our capable craft workforce would do a good job of building and supporting operation. Eventual opportunity from the storage capabilities resulting from PNNL's materials scientists will enhance the pairing of wind and Energy Northwest base load power.

I am concerned for our environment, the wildlife, and our community. The turbines will disrupt everything and I am worried about the impact the turbines will have to my friends and families health and wellbeing. I do not feel the turbines are in the best interest of our community. I do not support the turbines project.

Noise from wind turbines has been documented to have negative impacts on animal as well as human health. Scout Clean Energy should be required to submit a site plan showing the exact location of each turbine so that a noise study for each turbine can be performed. Turbines that produce negative impacts to nearby residents or wildlife should be relocated or removed prior to approval of the project. Particularly I noted that the conclusions in chapter 5 \* Vegetation: Conclusion(a): The Proposed Action would meaningfully contribute to cumulative impacts on Priority Habitat and special status plant species. \* Wildlife and habitat: Conclusion(a): The Proposed Action would meaningfully contribute to a cumulative impact on habitat loss and degradation, habitat loss for special status wildlife species, barriers to movement, and wildlife mortality.

I am apposed to the wind turbine project in the Horse Heaven Hills as the noise from them have been shown to be harmful to humans and animals. Also the light pollution to the area would effect the quality of life of the people living in the surrounding area. I am also concerned that the preliminary studies that must be done before construction of the turbines can not be completed if there is no clear mapping of where the turbines shall be erected.

Eyesore and milieu degeneration is a problem with these huge wind turbine farms, to a point that my opinion is that the Horse Heaven site shouldn't be approved. I'd like to mention that I've noticed that unlike other large structures such as transmission lines, dams, and large roadways that mar the milieu, the wind turbines are way worse because not only are they huge, environmentally disfiguring structures, THEY MOVE, which catches ones eye, and is fact about impossible to ignore; our eyes, of course, are attracted to things in our visual fields which stand out. Moving white blades of daylight and the flashing red lights of nighttime turbines are not helpful to driving safety-- I've encountered some which disturb my driving attention so much that my safety is significantly lessened. Thank you, Steve Fabian, Richland, WA.

I am against putting windmills on the Horse Heaven Ridge or anywhere. Windmills are NOT VIABLE! That means they are NOT COST EFFECTIVE. The spent/used blades are useless, destroying perfectly good land. Hydro (water-powered) is the best renewable, viable, green energy there is. To destroy electricity-making dams is criminal! The windmills look like crosses (for all the wildlife that is killed?). The blinking lights at night are polluting the darkness.

My first comment regards the visual impact of this project. I live in N Richland, some distance from the project; however, I have been walking the Columbia River path in Leslie Groves and Howard Amon Parks for over 30 years and have been viewing the Horse Heaven hills from the elevated points of the walking path, where I am approaching the dike and along the dike. That has always been an enjoyable high point of my walking experience, to take in the views of the Horse Heavens from those vantage points. My concern and my opposition to this project is based on the fact that the wind turbines will dominate that view and significantly diminish the natural beauty in that view. My second comment and point of opposition is based on the fact that this project would not be possible without heavy subsidizing from the tax payers. I am opposed to these subsidies.

Not at all in favor of this ugly project. Where will the electricity be going too. Will my power bill be going down. Too many workers and where will they find adequate housing in a community that is already being pushed to the brink. Current Infrastructure will not accommodate increased traffic. Ugly sight on rugged hillsides. Will decimate the bird population. Disposal of these components will pollute the environment.

The massive area selected for the wind turbines and solar fields is geographical as wider east to west than the Tricities. With over 200 turbines of which many, or most are 500 feet tall. What a blight to our views they will be. Additionally, our electric rates will increase dramatically due to the cost of the wind turbines. Erection of wind turbines damage the environment with massive concrete and steel bases. Ultimately the blade disposal is NOT RECYCLABLE! They are buried. Added nuclear option would be much more efficient and effective than the outrageous wind turbines.

I am opposed to the windfarm due to the threat to wildlife, part of this area is called goose gap for a reason. I am opposed also because of the dirt and dust hazzrds this project will add to people living down wind. I am opposed because we need to protect our Ridgeline views and finally I am opposed because there is no extra water to use for this project and water should not come from kennewick, KID nor aquifer.

Dear Council, I write to commend this council on the thorough analysis included in the DEIS for the Horse Heaven Clean Energy Center and recommend the project's approval. This review is based in a factual and scientific methodology, a forthright accounting of how the project will impact the environment and surrounding communities, and clear mitigation measures that avoid and minimize the most significant potential impacts. This impartial, science-based approach is needed, particularly considering many of the emotional and inaccurate appeals that have been made about the project. In serving on Benton City Council, I've been privy to some of the discussion surrounding this project, including points raised about visual impacts, and opinions about how private landowners should exercise their private property rights. It is true that individuals may have a difference in opinion about what our region's landscape ought to look like. It's also true that wind turbines are prominent features which will be seen by many and may illicit varied reactions. What has been lost in this discussion, however, is an appreciation of private property rights – a value that is typically held dear by many in this community. The proposed project was deemed to have land use consistency. Now, the DEIS has identified strategies for reducing and alleviating the project's most significant impacts. This includes the restriction of turbines within proximity of non-participating residents and critical viewpoints. Opinions may vary on this project, and on the issue of views, but we ought to be very careful when it comes to telling private property owners what they can and cannot do on their lands, outside of the existing regulatory review process. Sincerely, Jessica Wadsworth

I will be directly impacted by the wind farm due to the location of my home, however the entire Tri Cities will be directly impacted way more than they expect. I oppose the wind farm vehemently. The proven physical and mental health hazards are at the center of my objection. The pulsation, blinking red lights, the increased fugitive dust, possibly chemical laden with herbicides, and the steady hum, are all proven to have a negative impact on health, both human and animal. Thousands of birds will be killed. No land owner or wind farm which is an industrial manufacturer of energy should be allowed to infringe on the wellbeing of another. This is 72,000 acres that is all near 308,000 people!!! Central Washington is a vast area where no one lives. That is far better suited for this wind farm if it must be built. Good health is our single most valuable possession. To infringe on that for ANY reason is unfathomable, and this is pure greed.

The Horse Heaven Clean Energy Center underscores the significant economic opportunity of building out Washington state's clean energy future. As a life-long resident of Washington State I fully support this project. The project will help advance the state's ambitious climate goals while creating a substantial number of family-wage jobs and economic activity in Benton and Franklin Counties. Developing the project's hybrid combination of wind, solar, and battery storage applications will create as many as 930 jobs for skilled construction workers. Through building local access roads and foundations to support the technology, the project will employ crane operators, electricians and skilled laborers. The project will be a significant source of employment in the local area. The jobs required by this project are high-paying, family-wage opportunities. Economic impact studies examining the project estimated the typical income per worker during the construction phase to be \$113,500. That's nearly 60% higher than the average regional compensation across industries and 37% higher than the compensation in the construction industry for Benton and Franklin Counties. The studies also showed that at full build-out, the project could amount to at least \$73 million in labor income and \$143 million in total economic output. Following construction, the project will also create a combined direct, indirect and induced total of 56 long-term high-paying jobs during its estimated 30-year life span. While the project brings clear and substantial benefits to families and workers in the local area, it will also help advance Washington state's broader clean energy economy. The project will keep workers busy in our Ports and shipping industry as the turbine parts make their way to the Tri-Cities. It will also drive further investments in new and existing workforce development and educational programs to prepare students for careers in the growing renewable energy sector. Such programs already exist at Walla Walla Community College, Bellingham Technical College, and Centralia College, all of which will increasingly important as these projects continue to move forward. I urge EFSEC to advance this project to take advantage of these clear opportunities. Thank you for your consideration, Bob Zappone

Michele Windsor, P.O. box 586, 99347 I am writing to express my support for the Horse Heaven Clean Energy Center and the role it will play in helping Washington achieve the ambitious decarbonization goals we set for ourselves with the passage of the Clean Energy Transformation Act (CETA) in 2019. I believe strongly in impact mitigation and value EFSEC's process, but know that Washington's ability to realize a carbon-free future will depend on permitting large-scale clean energy projects in a timely manner just like the Horse Heaven Clean Energy Center. This is a good project with appropriately identified mitigation measures, and backed by an experienced team that will produce up to 1,150 MW of renewable energy through a combination of wind, solar, and battery storage technology. With the passage of CETA, Washington established itself as a leader in the fight to curb global emissions. The state now has a responsibility to ensure the clean energy transition can be achieved in the necessary timeframe to facilitate fossil plant retirement, and in doing we can set an example for the rest of the nation to follow. Thank you for your consideration.

Elaine Root, 7818 Warren Dr N W, Gig Harbor, 98335 I am pleased to submit this letter to share my support for the Horse Heaven Clean Energy Center. The climate crisis is the defining challenge of our time, and it is imperative that we take action to mitigate its impacts. The Horse Heaven Clean Energy Center would be a crucial step in that direction. If approved, the project will help Washington meet its goals for reducing greenhouse gas emissions and move closer to becoming a carbon-neutral state by 2045. By investing in these large-scale clean energy projects, we can ensure that we meet the increasing energy demands in Washington with renewable sources. This project will have a combination of wind, solar, and battery storage components that will provide long-term energy viability. In addition to reducing carbon emissions, the Horse Heaven Clean Energy Center will also create jobs. The project is estimated to create over 900 construction jobs and 56 full-time jobs once operational. These are good-paying jobs that will have a positive economic impact on the communities in the Tri-Cities region. Once the project is completed, it will also generate millions in public revenue that could fund public safety and education. Washington has a responsibility to do its part by setting an aggressive timeline for retiring fossil fuel-powered plants, as well as permitting replacement power resources in a timely manner. The Horse Heaven Clean Energy Center will deliver substantial job growth and local economic development while reducing our state's reliance on fossil fuels and set us on a path to a cleaner, healthier future for all. I encourage you to consider these comments. Thank you for your time.

Sandy Ferrin, 4000 California Ave SW, 98116 I support the Horse Heaven Clean Energy Center because I support a greener and cleaner future for Washington State. A large-scale clean energy project like the Horse Heaven Clean Energy Center will help Washington reach a carbon-free future and even position our state as a leader for renewable energy. By greenlighting projects like this, Washington can be a change leader, both regionally and nationally, with home-grown power supply solutions. This project will not just help the state as a whole – it will also benefit the local economy by providing over 900 construction jobs and 56 full-time jobs, while generating tax revenue to support public services for the Tri-Cities community. I write you to express my wholehearted support for this project because the benefits, locally and globally, are what we need to sustain a greener future. The state has a responsibility to foster positive environmental impacts, and the Horse Heaven Clean Energy Center can be a key step to making a real difference for the climate. Thank you for considering a greener, cleaner future.

Tom Kniffin, 3205 ne 87th Avenue, 98662 I am pleased to submit this letter to share my support for the Horse Heaven Clean Energy Center. The climate crisis is the defining challenge of our time, and it is imperative that we take action to mitigate its impacts. The Horse Heaven Clean Energy Center would be a crucial step in that direction. If approved, the project will help Washington meet its goals for reducing greenhouse gas emissions and move closer to becoming a carbon-neutral state by 2045. By investing in these large-scale clean energy projects, we can ensure that we meet the increasing energy demands in Washington with renewable sources. This project will have a combination of wind, solar, and battery storage components that will provide long-term energy viability. In addition to reducing carbon emissions, the Horse Heaven Clean Energy Center will also create jobs. The project is estimated to create over 900 construction jobs and 56 full-time jobs once operational. These are good-paying jobs that will have a positive economic impact on the communities in the Tri-Cities region. Once the project is completed, it will also generate millions in public revenue that could fund public safety and education. Washington has a responsibility to do its part by setting an aggressive timeline for retiring fossil fuel-powered plants, as well as permitting replacement power resources in a timely manner. The Horse Heaven Clean Energy Center will deliver substantial job growth and local economic development while reducing our state's reliance on fossil fuels and set us on a path to a cleaner, healthier future for all. I encourage you to consider these comments. Thank you for your time.

We don't believe the wind farm will provide enough energy at the times the extra electricity is needed to justify the cost to install the windmills or the disturbance to the growth of the City of Kennewick. Kennewick is growing and can only grow to the south where the windmills if installed will severely restrict the growth. The noise and lights of the towers as well as the view from the area will be very objectionable. There doesn't appear to be a plan in place to demolish and remove the windmills at the end of their lifecycle which is another real problem.

I am COMPLETELY AGAINST THE HORSE HEAVEN HILLS WIND TURBINE FARM!! Scout Energy has no regard for the objections of the People of Kennewick and surrounding cities and neither does our Governor Inslee!! Scout will be tearing up a designated wine appellation with some of the best agriculture land in Wa. State and completely destroy a newly developed area for our pronghorned antelope that are close to extinction!! DO NOT BUILD THIS MONSTER FARMS!!!!

I don't want to see this happen! 1) Those things ruin the beautiful skyline that so many enjoy. 2) They do not produce enough power and are not a good replacement for ANY energy source. 3) They do have to be maintained by oil! The blades do have to be replaced leaving old ones to be dumped. WHERE?! They are huge! 4) They highly affect nature! Many birds have been killed by these monstrosities! <https://www.smithsonianmag.com/smart-news/how-many-birds-do-wind-turbines-really-kill-180948154/> <https://www.birdwatchingdaily.com/news/conservation/new-study-estimates-573000-birds-died-at-wind-farms-last-year/> 5) This can affect farming and grazing along with possible growth in housing there. Idaho is also as concerned as we should be. <https://www.kivitv.com/ksaw/locals-raise-opposition-to-wind-energy-project-as-environmental-impact-statement-release-looms> 6) I am unsure who would actually get what energy comes from them. I do know that Idaho Falls put them up on their mountainside, very ugly, and every bit of that energy is being sent to CA! So CA is gonna start putting these everywhere they can and destroy everyone else's states with these to try to benefit themselves. That is not good! <https://dailycaller.com/2023/01/09/real-concern-locals-tear-idaho-wind-project/> Also, the absurdity of stopping gas stoves is just that, absurd! Just saying! Someone needs to defend our rights for gas!

I am against any more wind or solar farms in our Tri City area. Already on a clear day you can see the ugliness of those on the hills around the valley. At night all one sees are blinking red lights. Birds are killed by them including protected birds like our Bald Eagles. Windmills are not environmentally safe - they use gallons of oil during their lifetime, as we saw a couple summers ago they can start wildfires, there is no recycle program for the blades. Plus, most are made in China not the USA.

With Family members who share the direct view & have grave concerns about the environmental impact, so much so they packed up their entire house and planned on moving, i make a plea for ONLY SOLAR power generating structures be put on these lands vs the negatively impactful wind turbines. Please do not put these in the proposed location.

I don't see a direct benefit to these monstrous structures (windmills). The energy they develop will not benefit the local population but instead bring many adverse impacts ie; sound, concerns impacts to animal and bird populations to say nothing about the ugliness cast upon God's landscape beauty.

Please address the following issues regarding the proposed Horse Heaven wind project (HHWP). 1. I live approximately 1 mile North of the proposed turbines and witness first hand almost year round thousands of birds flying directly into the path of the proposed turbines. See link to pictures. <https://photos.app.goo.gl/Nw1mcseTU3zFSaTB8> All but one picture I posted is from the same time and spot looking different directions. The groups of birds stretched as far as I could see in every direction. Is EFSEC aware of this? Who will be responsible when many birds are injured or killed by the turbine blades? 2. Quite often there are a pair of owls hooting on roof tops at night. I have seen them or another pair nesting in the canyon in the proposed turbine area. 3. I also see many hawks in this area. Is EFSEC OK with killing or driving them off as well? 2. There are several houses nearby and more being built at this time. This is a housing growth area to the south of town. Please explain why the EFSEC committee would subject our Horse Heaven (proposed turbine hell) community to: a.) Low frequency sound, B.) light flicker during the day, C.) stirring up dust from the nearby dry wheat fields. D.) Light noise. My hot tub and general view is of the Horse Heaven area and the marker lights would ruin our serene natural landscape. 3. According to Western Power Pool Western Resource Adequacy Program the massive HHWP 850 megawatt project would only have 8% effective power, equaling only 68 megawatts of effective power that is generated at a time when it is not needed. Please see the attached slides and explain the benefit of this project. Link to Western Power Pool Western Resource Adequacy Program: <https://www.westernpowerpool.org/about/programs/western-resource-adequacy-program> Thank you. D. Brent & Karen Strecker

These many monstrously large windmill towers (higher than the space needle) will destroy the beauty of the surrounding area. They will also decimate the raptor population such as the recovering eagle population. And who knows how load or visually disturbing the spinning blades will be? There are plenty of other less controversial or intrusive ways to get green energy such nuclear power.

You haven't given a designated area for EACH turbine; therefore no noise study can be performed. We know the noise factor is a problem to health for human and animals. Lack of sleep due to the noise can cause major health problems for citizens. The AM is horrible to citizens. The rotation is a death threat for birds. Some animals are injured to the loss of sight regarding vibration of these turbines. And we know chickens quit laying eggs due to them. Any lights attached to them are a problem for all residents that can view these turbines. Infra-sound is detrimental to our health. Vibrations can cause pressure pulsations to liquid tanks. These turbines are to do away with alternative energy products, but they MUST have gas and oil to run. Then sometimes they have come apart and slung the blade where someone could get hurt. There is no way to recycle blades. The blades are not USA made - China benefits which is against most USA citizens. William Acker, Energy Engineer states the dangers of the turbines. I realize the land owners will benefit greatly money-wise, but neglecting the citizens surrounding these turbines MUST be a factor to consider. The electricity they will produce will be probably be sent to Seattle or California. No good reason to put them here. AND - truck traffic, the dust factor, the fire danger, what water will you use for construction and to put out fires, are they too tall, blades too flashing, too close together, too many, flashing lights, animal injury and death, etc. are all problems. Therefore: Submit a site plan for exact location for each. Do a 360 degree 6 month noise study for each turbine. Any turbine that produce detrimental noise to citizens or animals must be removed for your plan. Thank you. Louetta Shipler 2704 W Old Inland Empire Hwy Benton City, WA 99320

This project will ruin and overwhelm the beautiful landscape that make the Tri-Cities a special place to live. It needs to be moved closer to the Washington population that requires it. Other clean energy alternatives are available, for example, small modular reactors. They could easily be placed near metropolitan areas where the demand is higher. The organization involved in placing so many wind turbines main goal is financial gain. Please consider an alternate area or smaller number of turbines for this project that does not overwhelm the Tri-City landscape.

We are one of many families that are building homes within 1-2 miles of many of the proposed windmills just south of Kennewick. In the report, there is not much mention of noise from the windmills or the vibrations these will cause. Especially due to the size of the proposed windmills. There are many health effects that must be considered. It seems irresponsible to place windmills that are the size of the Space Needle within a couple miles of homes and businesses. You are potentially ruining our beautiful horse heaven skyline and impacting the physical health of thousands of Benton County residents. Why? There is so much room, in so many places that are more rural. Please do not do this Please review this case study <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3653647/>

This is in opposition of the Horse Heaven Wind Farm. In Benton County, we already have the ability to harness energy through nuclear and hydroelectric power. In this area, harnessing a mere 27% of wind power is not a significant amount of energy considering all of the documented negative impacts the turbines may have to our local environment. It is proven that wind turbines have a negative effect on animals and human health, along with creating an undesirable visual landscape. The cost to develop a local windfarm does not appear to be cost efficient when we have two other sources of energy currently in our backyard.

If the wind turbines must go ahead, they need to be at least 2 miles from residential structures, specifically non-participating community members. There are multiple studies that show large turbines cause auditory and psychological health risks to nearby residence.

The size and density of the proposed wind turbines is far too great. I'm not sure if this will positively impact my rural neighbors in badger canyon. We live in a rural area for a reason. Wind turbines is not one of them.

EFSEC DISCOURAGES PUBLIC INPUT FOR HORSE HEAVEN PROJECT BUT NOT GOLDENDALE ENERGY STORAGE? Goldendale 64 days of public comment. Horse Heaven 30 days during 6 major holidays (Christmas Eve, Christmas Day, New Years Eve, New Year's Day, Hanukkah, Holiday State Days, MLK. Later after public pressure, 15 days were added. DOES THIS ENCOURAGE OR DISCOURAGE PUBLIC INPUT? THREE public input occasions for the Goldendale project plus media, email and social media communication HHH Project...ONE phone meeting - in March 2021. Audio and access was very difficult for some and impossible for others. EFSEC Senior Management has openly recognized it. PUBLIC INPUT ENCOURAGED? Car Tour of HH Project EFSEC led by "Scout". The public was invited but asked by senior management Not To Speak. PUBLIC INPUT DISCOURAGED? Wautoma Solar Project Town Hall was A Face to Face meeting which included EFSEC members in the Tri Cities and meeting at Columbia Basin College. No public meetings are scheduled for Horse Heaven Project? Is this fair? IT LOOKS LIKE PUBLIC INPUT WAS NOT ENCOURAGED....AND IT'S NOT A GOOD LOOK. The Spirit of SEPA as written is a fair process. It encourages public input with a fact based approach. However In practice SEPA becomes a whole lot of words about nothing. It's too bad. The actions mentioned above clearly shows EFSEC is a Siting Approval Process. MPMInelli

Consideration should be given to moving the wind farm further away from the city limits and closer to the Columbia River. There is a significant amount of open land between the Tri-Cities and Umatilla. Having the wind farm in an area less visible to Tri-City residents would mitigate the problem of unsightly turbines impacting residents while still allowing the project to go forward.

Is Scout Energy and the State of Washington prepared to be sued by people who have their hearing impaired by wind turbines? If these turbines and their vibrations are damaging the eardrums of whales in the Atlantic Ocean what do you think will happen in the Tri Cities? These turbines are too close to the city. These turbines will destroy flight patterns of birds and will drive native fauna out of the area. Just say NO!

EFSEC should disapprove this project due to its proximity to a metropolitan area or downscale the project to reduce the visual and environmental impact to the Tri Cities area. Having such a large project located so closely to a metropolitan area is a terrible precedent. This project has no benefit to residents living within the area. None of the local utilities or residents will receive the energy from this project. At a minimum, the turbines should be downsized in number and in height, and require the project to utilize systems approved by the the Federal Aviation Administration that detect aircraft radar and turn on only when planes are flying low in the vicinity.
