Gloria Sferra, 9764 Bracon Ave So, 98118 I support the Horse Heaven Clean Energy Center because it is a step towards the carbon-free energy future we need to combat climate change while meeting the increasing energy needs of Washingtonians. Our state can and should be a national leader on clean energy development! We passed the Clean Energy Transformation Act with the goal of removing ourselves from fossil-fuel reliance. A big part of meeting that state goal is getting new, renewable energy resources online as in time to avoid energy shortages. Horse Heaven Clean Energy Center will add up to 1,100 MW of renewable energy to our grid along with battery storage to help address intermittent conditions. Horse Heaven Clean Energy Center is not the first solar or wind project that the state has greenlit, nor should it be the last. But, today, it is a critical step in the right direction for Washington to responsibly transition our remaining fossil fuel dependent energy sources to renewable energy, curbing emissions and meeting the needs of our communities. I strongly urge EFSEC to support this project and move it forward.

Nancy Little, PO Box 971, 98569 I am pleased to submit this letter to share my support for the Horse Heaven Clean Energy Center. The climate crisis is the defining challenge of our time, and it is imperative that we take action to mitigate its impacts. The Horse Heaven Clean Energy Center would be a crucial step in that direction. If approved, the project will help Washington meet its goals for reducing greenhouse gas emissions and move closer to becoming a carbon-neutral state by 2045. By investing in these large-scale clean energy projects, we can ensure that we meet the increasing energy demands in Washington with renewable sources. This project will have a combination of wind, solar, and battery storage components that will provide long-term energy viability. In addition to reducing carbon emissions, the Horse Heaven Clean Energy Center will also create jobs. The project is estimated to create over 900 construction jobs and 56 full-time jobs once operational. These are good-paying jobs that will have a positive economic impact on the communities in the Tri-Cities region. Once the project is completed, it will also generate millions in public revenue that could fund public safety and education. Washington has a responsibility to do its part by setting an aggressive timeline for retiring fossil fuel-powered plants, as well as permitting replacement power resources in a timely manner. The Horse Heaven Clean Energy Center will deliver substantial job growth and local economic development while reducing our state's reliance on fossil fuels and set us on a path to a cleaner, healthier future for all. I encourage you to consider these comments. Thank you for your time.

Laurel Boucher, 18128 36 Ave W. Apt. M12, 98037 I am writing to express my support for the Horse Heaven Clean Energy Center and the role it will play in helping Washington achieve the ambitious decarbonization goals we set for ourselves with the passage of the Clean Energy Transformation Act (CETA) in 2019. I believe strongly in impact mitigation and value EFSEC's process, but know that Washington's ability to realize a carbon-free future will depend on permitting large-scale clean energy projects in a timely manner just like the Horse Heaven Clean Energy Center. This is a good project with appropriately identified mitigation measures, and backed by an experienced team that will produce up to 1,150 MW of renewable energy through a combination of wind, solar, and battery storage technology. With the passage of CETA, Washington established itself as a leader in the fight to curb global emissions. The state now has a responsibility to ensure the clean energy transition can be achieved in the necessary timeframe to facilitate fossil plant retirement, and in doing we can set an example for the rest of the nation to follow. Thank you for your consideration.

I am writing to you today to tell you that the wind project on Horse Heaven Hills is terrible! The Horse Heaven Hills are a beautiful view seen from all over the Tri-Cities and the wind turbines will ruin that view. I live in West Richland and will be affected by this view, as well as the noise, wind issues and sunlight glaring off the turbines. The "power" that will be made by these turbines will go to Western Washington! Why would we do that? Western Washington needs to figure out their own energy issues, not use our land and views for their benefit. For so long we on the eastern side of the Cascades, have been the step children of the west side of Washington. It's time for western Washington to take care of itself. I respectfully ask that you don't let the wind turbine project go forward. Thank you, Geneva Carroll West Richland, WA

Hello, I am writing as a concerned citizen of Tri Cities. I am extremely opposed to the Horse Heaven Project. Windmills have been shown to have a negative effect on people and wildlife (See paper titled "Environmental Impact of Wind Energy" by R.Saidur N.A.Rahim M.R.Islam K.H.Solangi) especially given the close proximity of this project to a large population that is expanding exponentially. Please do not approve this project. It will leave a negative impact on the Tri Cities area that will be felt for decades to come. Brittany Cartwright

I initially commented a couple of years ago when SCOUT Energy first proposed the Horse Heaven wind farm and the Richland City Council had a comment period before the EIS was sent to Gov. Inslee. I am VERY OPPOSED to the proposed wind farm. I am not against alternative energy sources but have never been a proponent of the wind turbines. I believe they are truly an eye sore covering beautiful open landscapes which are rare enough in this day and age plus the fact that half the time they don't seem to be working cuz the wind direction is not going the right way, and there is no real means of storing the energy when there is wind either. Plus when you realize all the materials needed to first produce them and then they only last approx. 20 years and then have to be disposed of. Not to mention the havoc in creates for wild life in the area. On top of that--we in this area already meet state carbon reductions since we have abundant hydro and nuclear power, and so the wind farm does not really benefit except for a handful of jobs--it benefits the West side of the state and maybe other states as well. So if you insist you need wind turbines to meet the rest of the state's carbon mandates--then find some place on the West side to build them!!!

There needs to be a lot more work and study of this project before you even think of building it. We are now finding out that wind turbines are having a devastating effect on the bird population and the noise these turbines make needs to be evaluated. Overall I do not think this should be built at all

We are devastated to think of the ridge lines in our area lined with windmills, the impact to birds and animals, the flashing red lights at night. Concentrate on the dams which are already in place, and provide power in all types of weather. Picture from the top of Badger Mountain of the untouched Horse Heven Ridgeline.

Earth Friendly Properties

Q4. **Share any comment**

I am writing today as the former President and CEO of the Tacoma-Pierce County Chamber and the founder of Earth Friendly Properties. I am corresponding to express my full support of the Horse Heaven Clean Energy Center. As someone who has worked in Olympia for State Senator Pete von Reichbauer and across the State of Washington on economic development projects including in the Tri-Cities, the Horse Heaven Clean Energy Center exemplifies the kind of project we should support. First, we simply need power. Due to the near-term closure of coal-fired plants, the 2021 Northwest Power Plan calls for the development of 3,500 megawatts of renewable power by 2027. The state needs the power to avoid the risk of rolling blackouts that would be devastating to our regional economy. Second, the 930 jobs for skilled construction workers in the Tri-Cities would average an annual salary of \$113,500. Studies show the full build-out, the project will produce at least \$73 million in labor income and \$143 million in total economic output. Following construction, 56 high-paying long-term jobs will be created. This is significant improvement for the Tri-Cities region. The Horse Heaven Clean Energy Center will also be a state-wide energy and economic asset. As we are aware, we are all dependent on each other. The western part of the state depends on the agricultural community of the eastern part of the state. The eastern part of the state depends on the westside ports, consumer markets, and overall economic infrastructure. West side ports are critical to the agricultural community. This project will create west-side port and shipping jobs while also producing workforce development opportunities for both sides of the State. I would also argue there is a great opportunity for the eastern Washington agricultural community, including the wine industry, to brand themselves as the most "green renewable" products produced in the country. With Hydropower, wind, and solar energy, we all win, including mother earth. Best wishes, Tom Pierson, Founder Earth Friendly Properties PO Box 502 Milton, WA 98354

As a concerned citizen and lifelong resident of the Tri-Cities I am against this wind turbine project. I recently retired from Franklin PUD and know that we get the majority of our power from hydroelectric and nuclear and that we also meet state carbon reduction mandates. The energy produced from this project will be used to solve other utilities needs to bolster their clean energy portfolios which are located in western Washington. Certainly there are other more rural locations in eastern Washington that this project can go to that does not affect thousands of people and could use the boost to their economy. Keep our scenic vistas clean and take this project somewhere else. Carrie Locke Franklin County Resident

I support wind and solar energy development; however, I do not support placing the proposed wind farm so close to the Tri-Cities community. I do not believe the submitted study accurately reflects the impact to our community. A local team has completed an analysis of the project that evaluates economic impact associated with property value, tourism and environmental impact. Please take this into consideration and find a location that is not so close to our community.

I am strongly against the proposed Horse Heaven Hills wind turbine project. The size of the project is far too large and will affect the entire community. It will ruin our scenic vistas which in turn will jeopardize tourism and economic growth. I understand that these very tall wind turbines are very noisy and contribute to noise pollution in the community. The Tri Cities is very fortunate to have hydro and nuclear energy sources that are very cost effective and clean. Wind turbines are not cost effective without the energy credits given to the industry and are not reliable when the energy is most needed. The enormous increase in trucks to bring in the wind turbine parts and to erect the turbines will add to the air pollution in our beautiful area. And lastly, the disposal of the blades in landfills during routine maintenance adds to the environmental problems in our area. Scout Energy should find a location for their project in California where the energy will be used. The fact that Scout Energy is going around the wishes of the Tri Cities Community and submitting an application to the Washington State Energy Facility Site Evaluation Council for permission to build this project is infuriating.

Scout's Horse Heaven Clean Energy Center is an Essential Energy Source and A Winner for the Tri-Cities To date myself, I first started working on Tri-Cities issues in 1968 when I first went to work for U.S. Senator Warren Magnuson. Later I was elected to the U.S. House of Representatives in 1976 and served for 36 years as a Member of the House Appropriations Committee. During that span of time, I developed lifelong relationships with the Tri-Cities community and people like my longtime friend Sam Volpentest to Congressmen Morrison, Doc Hastings, and Dan Newhouse. I successfully fought for funding and supported almost every major Tri-Cities initiative from Nuclear Power and the cleanup of Hanford, to countless Pacific Northwest National Laboratory initiatives. I also have spent time fishing and hunting in the area. I believe the Tri-Cities is a unique and special place made up of great and innovative people. I have always felt a special connection to the area. I've had the opportunity to learn about the Horse Heaven Clean Energy Center project in the Tri-Cities and I am convinced it is a great project that will provide 1,150 Megawatts of needed power while also generating \$262 million in new revenue that will help keep local taxes from rising at higher rates. These investments will result in new funding for important public services, such as the hiring of teachers, police officers, firefighters, and nurses. It is estimated that the project will create over 900 construction jobs and up to 16 permanent jobs. And importantly, the project developer has made good on its commitments to the community, recently signing an agreement with local labor unions that will ensure the project is built by the Tri-Cities workforce who will have access to good-paying jobs that are close to home. Put simply, The Horse Heaven Clean Energy Center project will put the Tri-Cities on the map as a cutting-edge renewable community with a thriving green economy powered by integrated hydro, wind, and solar power. This project will also substantially advance the local communities' efforts to make the area a regional Clean Energy Hub and work in concert with nuclear and hydropower. How can the Tri-Cities claim to be a clean energy hub if it is opposed to wind and solar? The development of this project is timely as all of us have recently felt the increase in extreme weather events - excessive heatwaves and other storm events are becoming far more common. With a growing population and increased local demand for power, we need our existing hydropower and additional wind, solar, and energy storage projects like Horse Heaven to meet that demand and avoid brown and blackouts in the Tri-Cities and around the Pacific Northwest region. Power experts and the new Northwest Energy Plan called for 3,500 additional megawatts of generation to meet this demand, with renewable energy playing a key role. Our economy and our families cannot be put in jeopardy by failing to adequately prepare for a robust energy future. As an old friend and supporter of the Tri-Cities, I am convinced the Tri-Cities and the Northwest need the Horse Heaven Clean Energy Center. The Tri-Cities has always embraced needed changes and it has prospered for it. Former US Congressman, Norm Dicks

To the Energy Facility Site Evaluation Council: Scout Clean Energy's SCE proposal to install an estimated 244 wind turbines and solar arrays over a 110 square mile area between Benton City and Finley in Eastern Washington, with some turbines as tall as the Seattle Space Needle will negatively impact the lifestyle many of us here in Eastern Washington have chosen for ourselves. I value the wide open space, rolling hills and agricultural vistas; vineyards, orchards, wheat and farm fields that I see as I travel from my home in Prosser to the TriCities. In fact one of my most treasured views is when I leave my son's home in South Kennewick heading south on Highway 395, looking directly at the Horse Heaven Hills and as I continue westbound on I82, I can view the four peaks of our area, Rattlesnake, Red, Candy and Badger Mountains all lined up and the expansive Horse Heaven Hills to the south with the evening sunset as backdrop. The community of the TriCities has worked very hard for a very long time to develop an outstanding hiking trail system from Badger Mountain across Little Badger Mountain to Candy Mountain, because the people here value our unique and striking views. We appreciate the natural beauty and diverse wildlife of living in a rural area. We live here because we love living here, we don't want our land, views and night sky negatively impacted by SCE HHH project. Think how the people of the Puget Sound would feel having 250 wind turbines on the slopes of Mt. Rainier. Or on the banks of Puget Sound. Our views and vistas are just as treasured to us and should be considered when placing large scale projects like the one proposed. The communities of the TriCities, from Prosser to Burbank, including Commissioners from Benton County have come out in the majority against Scout Clean Energy's (SCE) proposal. However, SCE circumvented our local authorities permitting process and applied directly to the State for approval, cementing a distrust of SCE to work with local jurisdictions on the environmental and personal impacts of the project. The first step in siting any project should be the input of the surrounding communities. It makes me so angry that now the approval of this project, given its size and consequence, has been given to a committee who will not have to live with the direct daily consequences. This Energy project does not directly benefit the citizens of the surrounding Tricity area in the way of supplying energy needs or even replace the use of fossil fuels for energy production in Washington State. See link below. The energy produced from this project will be sold to companies outside of Eastern Washington and possibly Washington all together. If this is the case, Scout Clean Energy needs to site this project in the area where the energy is needed and in truly rural areas where the impact to the people living there is minimized. Alison Burgett 159401 W Richards Rd Prosser WA <https://www.forbes.com/sites/jamesconca/2021/03/08/wind-turbines-on-washingtons-horse-heaven-hills--how-not-to-pursue-a-green-new-deal/?sh=68fbb1dd508d>

As a Benton County resident it appears to me that this is a great spot for wind energy to be produced. My life has been centered around agriculture and I have a good understanding of highest and best use of agricultural and range ground. This ground has relatively low value and production potential for agricultural uses and a wind energy development would provide the land owners a much better return on their investment, increase our county's tax roll and provide clean energy to the grid.

No to this plan for huge windmills cutting off our beautiful open view. Eastern Washington should focus on hydro, nuclear, the newer small nuclear plants, rather than unsightly wind turbines that kill wildlife and are unreliable and unusable unless the wind blows. At the very least, place them far away from any city or put them where they do not block the view. Also note, the blades and components of these massive windmills go into landfills....they do not break down into soil...EVER. Keep our reliable dams, utilize our nuclear plants, and shelve windmills until better technology is developed.

Blighting our beautiful Horse Heaven Hills with hundreds of bird killing wind turbines is unconscionable. Shame on the Audubon Society for stating that the impact to birds is minimized if these unsightly wind turbine farms are located properly. I strongly oppose this project on environmental grounds.

Our group of concerned citizens have been working on this issue for over two years. I've seen environments destroyed, animals killed, and the turbines themselves FALL APART. To me it seems that these wind turbines are a WASTE of money, they have an expiration date, and no means of clean-up when expired! I've asked Solar Co.'s where they recycle the batteries. They have no idea! Please reconsider building these wind farms until we are conclusive that they are best for our HHH agricultural area and will NOT DESTROY OUR BEAUTIFUL COUNTRYSIDE AND WILD ANIMAL LIFE!

Colleen Burns, 2440 E. North Crescent Ave, 99207 I am writing to express my support for the Horse Heaven Clean Energy Center and the role it will play in helping Washington achieve the ambitious decarbonization goals we set for ourselves with the passage of the Clean Energy Transformation Act (CETA) in 2019. I believe strongly in impact mitigation and value EFSEC's process, but know that Washington's ability to realize a carbon-free future will depend on permitting large-scale clean energy projects in a timely manner just like the Horse Heaven Clean Energy Center. This is a good project with appropriately identified mitigation measures, and backed by an experienced team that will produce up to 1,150 MW of renewable energy through a combination of wind, solar, and battery storage technology. With the passage of CETA, Washington established itself as a leader in the fight to curb global emissions. The state now has a responsibility to ensure the clean energy transition can be achieved in the necessary timeframe to facilitate fossil plant retirement, and in doing we can set an example for the rest of the nation to follow. Thank you for your consideration.

Deborah Gardiner, 274196 US HWY 101, 98382 I support the Horse Heaven Clean Energy Center because it is a step towards the carbon-free energy future we need to combat climate change while meeting the increasing energy needs of Washingtonians. Our state can and should be a national leader on clean energy development! We passed the Clean Energy Transformation Act with the goal of removing ourselves from fossil-fuel reliance. A big part of meeting that state goal is getting new, renewable energy resources online as in time to avoid energy shortages. Horse Heaven Clean Energy Center will add up to 1,100 MW of renewable energy to our grid along with battery storage to help address intermittent conditions. Horse Heaven Clean Energy Center is not the first solar or wind project that the state has greenlit, nor should it be the last. But, today, it is a critical step in the right direction for Washington to responsibly transition our remaining fossil fuel dependent energy sources to renewable energy, curbing emissions and meeting the needs of our communities. I strongly urge EFSEC to support this project and move it forward.

Cindy Harris, po box 1287, 98569 I support the Horse Heaven Clean Energy Center because it is a step towards the carbon-free energy future we need to combat climate change while meeting the increasing energy needs of Washingtonians. Our state can and should be a national leader on clean energy development! We passed the Clean Energy Transformation Act with the goal of removing ourselves from fossil-fuel reliance. A big part of meeting that state goal is getting new, renewable energy resources online as in time to avoid energy shortages. Horse Heaven Clean Energy Center will add up to 1,100 MW of renewable energy to our grid along with battery storage to help address intermittent conditions. Horse Heaven Clean Energy Center is not the first solar or wind project that the state has greenlit, nor should it be the last. But, today, it is a critical step in the right direction for Washington to responsibly transition our remaining fossil fuel dependent energy sources to renewable energy, curbing emissions and meeting the needs of our communities. I strongly urge EFSEC to support this project and move it forward.

My husband and I both agree that the wind turbines are not necessary for our area. We think they are a waste of materials and a problem for the birds that fly in our area. Not much has been said about the fact of how much water and cement they require and the fact that the blades have to be buried and do not decay.

I am against the wind farm proposed for Tri-Cities Washington. It is a bad fit for our community! Our beautiful sunset views, Our scenic countryside vistas will be a Marg! And all for what? And for the benefit of the west side of the state, and for the pocketbook of the contractor proposing this plan! Surely there is another location in a more rural place. This is a good looking town, a town growing much too quickly, and many decisions Concerning the livability of our area are being made. This decision is a biggie! Mark it is huge! We must turn down the Wind farm plan!

These windmills will of course be a major eyesore for the Tri Cities and the numbers of birds killed will be devastating. It seems that solar farming is likely to follow along the same footprint. Since both of these supposed green energy resources are intermittent, the need for huge amounts of battery storage to collect this energy for timely use is obvious. The recognized limited life span of these devices along with advanced technology resources will in 20 plus or minus years push them into obsolescence. There is little to no proposed future support to remove these components. What is likely to remain will be an entanglement of forever debris and trash scattered across the area. Why isn't nuclear power being considered in an area that has supported this technology for 70 years or so? The Hanford reservation could easily support renewed nuclear power and cause no additional burden to the local area.

I am opposed to locating wind farms near the Tri-Cities for the following reasons: 1) they are an eyesore 2) they harm the environment by killing raptors 3) they should be located near the populations that want the power. 4) they are intently wasteful of resources as a source of power. Nuclear is great more efficient. Small nuclear plants should be investigated. 5) the cost and planning for their eventual decommissioning should be included in estimates and the money for the same set aside.

We are excited to be part of this project to provide clean, renewable energy that our country so badly needs. Our land is in a windy place. We are glad that this energy can be harnessed to provide reliable energy. This energy will be collected while still allowing farming to continue growing wheat on this land. Our land is in the right place at the right time to participate in this important growth of wind energy for our nation which is seeking alternatives to using fossil fuels.

Wind mills should only be installed on land that would not have any future use such as residential, commercial or agricultural development. The placement of the proposed wind mills south of kennewick are not beneficial to our area and will only hamper any future development and are not environmentally friendly to wildlife. A better placement would be between Yakima and Ellensburg where no development could ever occur or on Federal land below Rattlesnake mountain on the 240 corridor.

Due to the overwhelming data supporting the inefficiencies of large scale wind farms relative to size and scope, their damage to native birds of prey that are quite prevalent in Eastern WA, and the daytime and nighttime visual pollution wind farms create, I am adamantly opposed to the proposed wind farm in the Horse Heaven Hills.

Wind turbines use massive amounts of oil; when they break, they leak that oil directly into the ground, contaminating fields and water sources. Turbine blades are not recycled, they are buried in mass pits to further contaminate the ground. Fires from broken turbines, leaking oil and lightening strikes would be a highly dangerous prospect in the horse heaven hills being in the desert already and so close to our homes.

I hope this wind farm is not a done deal. I am a Long time environmentalist, but the more I learn about the siting of this particular wind farm, the more I oppose it . I am a resident of Richland. It appears that this wind farm will loom over the entire Tri Cities, visible from each of the three cities. Visible from downtown. .Richland. It will impact each resident intimately. I am learning that the placement will destroy a good deal of the scenic beauty that residents and tourists value. Wind farms do not belong along the edge of cities! We are now an urban area of more than a quarter of a million people, not a remote rural region. The project does not belong here. In addition, .I am concerned that not enough care has been taken to evaluate the impact on local populations of hawks and eagles. I have worked elsewhere on a project monitoring wind farm impact on nesting golden eagles, and know first hand something of the toll these farms take. The proposed project will bring little benefit to the Tri cities, but will make someone...out of state!.... a great deal of money. Please, not here. Take this project to a remote area where it's impact on the quality of life of local citizens will be negligible, and where it will bring some good to the local citizens. Not here!

The DEIS for the Scout Clean Energy Horse Heaven Project shows an estimated death rate to birds and bats. Benton and Franklin counties and the areas surrounding the SCE HHH project are predominately agricultural farm lands that rely on bees, birds and bats to pollinate fruit orchards, vineyards and other income producing crops. A significant danger to birds and bats exists and the true effect cannot be established without specific locations for the turbines. SCE must be required to submit a site plan showing the location of each turbine to determine the impact to adjacent crops.

To the Energy Facility Site Evaluation Council I am concerned about the installation of over 244 wind turbines by Scout Clean Energy's project in the Horse Heaven Area in Eastern Washington. This article from the Harvard School of Engineering shows the effects of large wind turbines can increase day and night time temperatures by .24 degrees Celsius. <https://seas.harvard.edu/news/2018/10/large-scale-wind-power-would-require-more-land-and-cause-more-environmental-impact> A rise in local temperatures could have unknown effects on so many things. The cooling of homes in the summer, crop production and harvesting, the temperature of rivers and stream. I am against installing wind turbines in our direct area for this reason and so many more (noise, animal and bird population disruption and the disturbance to our landscape and views). I believe more study needs to be done before this large scale wind farm is installed in our area.

I am very much opposed to the wind farm project because of the severe negative effect on our environment. Few people in our area support it other than the very few greedy people who will gain financially from it's construction. The Horse Heaven Hills is a unique geological formation that adds to the scenic beauty of Eastern Washington and our wine country. Let's not destroy this asset with a hideous and expansive wind farm. The Horse Heaven Hills AVA is an important part of our wine region which brings tourist activity to the Tri-Cities and surrounding areas. This is a financial benefit to the entire community. I cannot understand why this wind farm is needed when we have abundant hydroelectric power. Wind energy is not very efficient. It produces a minimum amount of power for the cost and no power when there is no wind. It is my understanding that most of the parts are manufactured in China. How many birds would be killed by these wind mills? What happens when the blades need to be replaced? Where would they be buried? The cleanest, most environmentally friendly, efficient and cheapest energy is hydroelectric. Keep the dams on the Snake River. Spend the money to improve fish ladders rather than something as environmentally destructive as the proposed Horse Heaven Hills wind farm. We have a beautiful and clean natural scenic environment. Let's Keep it that way!

Today is January 28th. We received ballots this week for school Levy's. I was sad when I opened the envelope, because I was hoping we would be allowed to vote yes or no for the installation of huge turbines on our hills, but our governor did not give us that opportunity. The Tri-Cities are made up of three close cities - Richland, Kennewick and Pasco. There are 325,000 residents in the Tri-Cities. Between Richland and Benton City there is a growing city named West Richland. They have 15,000 residents. It has already been determined that in the center of Richland we will be able to see about 100 turbines. That is just not right. One of the worst things about having huge turbines and red blinking lights at night is that they will be here forever. The only thing our community receives from this is ugly hills. We have beautiful colorful sunrises and sunsets that may not be so pretty anymore. Since 325,000 residents have no say, I am hoping that the company from another state at least does not cover all of the hills with these huge turbines. Sandy Fishback Richland

Popular Mechanics: Turbines failures are on the uptick across the world, sometimes blades falling or spinning out of control and flying off, or even full turbines collapsing. When these conditions happen, it causes major damage to surrounding properties. July 2019 Juniper Fire in Klickitat County Washington caused by a faulty turbine, the blade falling off and catching the field on fire. These windmill turbines will be sitting on the ridge with homes at Tripple Vista, Canyon Lakes and Seal Springs. Homes and businesses are expending south on the hillsides every day. Remember in 2018 the Bofer fire it didn't take long for the fire to get out of control putting homes and lives in danger the community was lucky it only destroyed 5 homes and over 5,000 acres.

I am a resident of Finley Washington. I am totally against this proposed windfarm going in above my home and the homes of thousands of my fellow Tri Citians. I would like to comment from a scientific point of view. I spent a significant part of my working career as an employee of Energy Northwest's Maintenance Department, (Columbia Generating Station). Most of my time there was spent working with very large rotating equipment; (i.e., huge: motors, turbines, pumps, and generators) A significant portion of my employment involved specialized training in the "Vibration Analysis Department" so I feel I can comment with some degree of authority. Simply stated, all rotating equipment produces some degree of vibration, and as such the vibrations are felt in the rotating structure and its mounting point. In the case of these hundreds of Space Needle sized windmills it will be "felt" in the ground they are mounted on, and then transmitted perhaps as far as 5 to 10 miles away. One recent scientific Italian study measured a small windfarm's vibrations 6.8 miles away. I'm absolutely positive Scout Clean Energy will promise all of us that their windmills will not produce any "significant" vibration or discomfort to any of us stuck basically forever with this boondoggle. Like the tobacco Industry the windmill industry will always need more studies to prove anything negative about their product. Vibration from these windmills - the closer you are, the more you will feel in the seat of your pants, and then at the same time be able to see the ripples in your coffee cup. Anybody want a good buy on a million-dollar new home with a two-dollar view and a small vibration problem?

I do – with some qualms – support the Horse Heaven Hills Wind Farm project. Our growing state population and worsening climate are increasing our need for electricity. We need more low-carbon including renewable sources for that electricity. This project also includes benefits for local farmers, construction jobs, and some long-term jobs. Scout Clean Energy seems to have established a good working relationship with the Yakama Nation, which should minimize damage to culturally important areas. I strongly support the 150-turbine option over the 244-turbine option. The Horse Heaven Hills is not an ideal site for a massive wind farm, but the 150-turbine option should cause less harm to wildlife, wildlife habitat, and habitat connectivity. Fewer turbines should also reduce the impact of this project on our views. I'm concerned that the project could cause catastrophic losses to the ferruginous hawk population. Increased bird kills by wind turbines and transmission lines; disruptive activity near nesting sites, flyways and foraging areas; and the project's negative effect on one of their main prey species, the Townsend's ground squirrel, can be expected to increase losses to this species. This an important breeding ground for ferruginous hawks. I'm also concerned about impacts to other species. For example, sage sparrows and burrowing owls are already struggling, and pronghorn antelope need access to water. I realize this is a draft, but I hope the final EIS is more specific. I support the proposed mitigations to reduce the impact on wildlife, habitat and habitat connectivity. But how will they actually be implemented? As just one example, wind turbines will be moved farther away from canyons "where feasible." Minimizing the number of wind turbines too close to the draws and canyons, and transmission lines and roads crossing those draws and canyons, is important. The draws and canyons are where we still have native habitat. The rest of the Horse Heaven Hills is also wildlife habitat, but it's been degraded by farming and grazing. I'm glad this draft includes modifications to the fencing around the northern solar array. But it's not clear to me whether these modifications match the recommendations of WDFW to allow wildlife access to water. Mitigations during operations and during decommissioning could also be more specific. I'd like to see specific commitments to minimize the environmental damage this project will cause. I'm not asking Scout to do the impossible. But let's make this project as good for the environment as it's really "feasible" to do.

We strongly believe this wind farm project is of NO benefit to our beautiful local community and insist on a hard pass. This will negatively impact our area's visual and aesthetic resources. With the project covering almost 50% of the Horse Heaven Hill ridgeline it will be seen by the majority, over 80%, of our residents. The red blinking lights at night will also be visible. Simply stated this will be too many huge wind turbines too close to too many people! This project is too large to be located so close to a metropolitan area. This is not the norm for wind farms of this size. Our community will only continue to grow and thus the project will effect more and more people in the near future. It should not be built or at the very least be moved to a more rural area and scaled down. We must protect the rural natural habitat of the Tri Cities! Joe and Patricia Loera

My greatest concern with the proposed wind farm is its close proximity to established residential areas. Not because of the sound (which is a worthy concern) or the visual pollution, but because these farms pose a wildland fire threat both in causing fires and preventing access for fighting natural cover fires. As a volunteer with Benton County Fire District #1, I work to educate residents and property owners about this urban-wildland interface so they can mitigate the hazards from wildfires. And now we have a private, for-profit company trying to force a new threat on these property owners, which has the potential to increase their property insurance rates and put added strain on our emergency resources without providing additional funding to support the specialized training and equipment needed to manage these threats. Wind turbines are a fire hazard. Mitigation includes constructing the wind farms far away from populated areas. That is being ignored with this proposal. When a turbine catches on fire, it can still spin as the blades burn, throwing burning debris far from the turbine and igniting additional fires. We do not have the equipment to put out a wind turbine fire. A study by the SP Technical Research Institute of Sweden shows that 10-30% of all incidents in wind turbines that lead to a halt in energy production are due to fire. An average wind turbine fire costs about \$8 million dollars in losses. Is Sprout's insurance going to guarantee reimbursement of property loss and fire fighting expense in the event of a fire caused by their turbines? Please deny any and all permits for this project.

Please do not build a wind farm in our backyard. This area has grown into a beautiful neighborhood. We don't want/need all the negatives that go along with wind fields. Please leave our neighborhood and homes alone.

I say no. This huge project heavily impacts or area. We hike and enjoy the out of doors in these areas. The west side of the state is benefiting from our suffering. This is unfair. There is a huge negative reaction to this plan in our area. So many have lost faith that they have any power so are not even saying no. This is so sad and is not want the United States of America is about. It seems that we as an entire community have absolutely no say in what happens. The project will go through and all they have to do is go through the outlined steps of offering us a chance to say no. The project is too large. If all parts of the state must pay the price of using renewable energy make the project smaller with less impact and make similar projects on the west side too What is wrong with hydropower and more of the new small nuclear plants We retired in Washington and remodeled our home so we could enjoy our old age here. We hike to stay fit and enjoy the wildlife. Between this plan and Washington state heavy taxes we are now questioning staying in the area

I added a comment under the other section on your home page. I am in great support of this project as it is needed not only as a power generating facility but it can benefit the green energy side of our fair community as it grows bigger by the day. Sacrifices must be made however small to ensure the ability to sustain electrical power production without huge impact to the environment. These are the future of our ability to do that. I am a union millwright in the tri cities area. I currently have a view of the south hills wind farm we already have there. It's not far from my home. I have worked on wind farm projects before. The contractors go to great lengths to ensure the ground and area disturbed is returned to its natural state when the job is completed as well as throughout the whole process during the build. Please see my other comment on the other subtitle on your homepage as it may have a bit of information that could be helpful.

I have owned a home and have lived in Pasco, Washington for some 30-plus years. I am totally opposed to the proposed Horse Heaven Wind Project. Why should we in the Tri-Cities endorse or approve of a wind turbine project which would greatly benefit the western part of the state but which would provide very little benefit to the eastern part. On January 22, 2023, The Tri-City Herald's Editorial Board said it best in a headline entitled "Tri-Cities' sacrifice too great for wind turbine project." I agree entirely with what was stated in the Opinion piece. In addition, the cost to our avian wildlife would be tremendous. Slow-moving big-bodied birds like pelicans and herons, the majestic bald eagles, other eagles, osprey, and other water fowl would be killed along with smaller birds and migratory birds. All this to benefit only one section of Washington: the west. If the western part of the state wants wind turbines, they should build them where they live, not where we live. And our desert area is just as beautiful, in its own way, as the western part; better -- since we don't have the constant rain, wind, and humidity of the west. If the wind turbine project becomes a fait accompli, tearing down the hydroelectric dams will be next, and I am totally opposed to that as well. Please do not allow this wind turbine project to go ahead as planned. Sincerely, Kathleen Megow 3713 Road 109 Pasco, Washington 99301

.I can deal with the visual impact of the turbines during the day, but the nighttime illumination is an enormous and unnecessary blight on the area. It is my understanding that it is possible to install lights that would only switch on if there is an aircraft in the area. This should be a requirement for any installations in this area.

The Horse Heaven Hills area south of Benton City is a prime location for paragliding in Eastern Washington. The proposed wind farm will not only tarnish the beautiful area, but also pose several potential safety hazards to paragliding. There is the obvious risk of getting too close to a wind turbine and getting hit by a propeller blade, but this risk seems small and manageable. The larger concern is the huge area of turbulent air downwind of a turbine, which can significantly affect the capability of a paraglider to stay inflated and capable of flying. The Draft EIS does not address any of those risks or how they will be managed. It would be important to include some sort of assessment of unsafe area downwind of a turbine. I'd imagine the size of this area depends not only on the size of the turbine but also the wind speed and other external factors (e.g. proximity to other wind turbines, etc.). This would not only be of interest for paraglider pilots but also for other light aircraft (small planes, ultralights, powered paragliders, trikes, etc.). Please see attached some pictures of paragliding at the Kiona ridge (the ridge south of Benton City, between Weber Canyon Rd and McBee Rd).

This proposed wind farm would create obnoxious visual blight on the Tri-cities and do harm to the environment. Clean energy should be built adjacent to the majority of the users. These windmills, if built, should be installed in Seattle and Tacoma. Their growth is creating the energy demand, so let them look at them.

Please ensure the residents of Benton County and the surrounding Central Washington area have the opportunity to vote in the next general election if the Horse Heaven Wind Farm should be constructed. The people of Central Washington have the right to decide on matters affecting our local environment and ecology, not the bureaucrats in Western Washington and a profit hungry Limited Liability Corporation (LLC).

I am opposed to this project. The horse heavens hills wind park should not be built. It is to close to the existing community, it will endanger migrating birds, it will not provide many long term jobs, and the facility is not needed locally.

Wind turbines have numerous drawbacks and negative impacts on the environment and communities with noise pollution, threat to wildlife, especially birds, visual pollution and impacts on scenic views, potential health hazards. These factors become permanent scars on the land as the turbines have limited life-spans and cannot be recycled thus the land eventually becomes energy graveyards. This certainly has a gross negative impact on property values FOREVER. As an energy source, they fail as their production is intermittent and without any energy storage, a very difficult to use source and as mechanical devices, prone to high maintenance. Many of these projects across the country are created to take advantage of the federal subsidies that only last ten years then they become unprofitable so maintenance declines and defective turbines abandon. We should not let our area to become a playground for those who wish to exploit federal subsidies for profit at the cost of our environment. These issues raise questions about the sustainability, cost-effectiveness, and environmental concerns of wind energy as a solution for meeting our energy demands. Any turbine project MUST include a full life-cycle commitment by the developer which includes full restoration and off-site disposal of defective systems, damaged materials. See attached file.

I support the proposed Horse Heavens wind farm project. I am a new resident to the Tri Cities area. The goal of clean air and utilizing all of our resources to get us closer to the goal post includes the wind turbines. The wind farm is future oriented vs continuing to live in the past.

No No. we are totally against the continued pollution of these wind turbines due to the effect on the wildlife, environment, appearance, and lack of justified 'benefit'. Please do not approve this effort!

I am generally in favor of wind farms...we need to use every form of energy available to us in a prudent manner. But this proposed, huge farm is not a good fit for this location. It will create a "wall" for future expansion of Kennewick and blight our horizon. At the risk of being a "NIMBY" - find a better location away from a major population center!

The Horse Heaven Wind Project would continue to the effect of other Wind Projects in damaging the scenery around the Tri-cities. Looking at the rolling hills with Wind Machines on top of them totally destroys the areas natural beauty. Wind Generators are also not the cheapest source of power. Let's invest in nuclear and solar. Strongly against wind generators.

I am against locating the HHH windfarm on the ridges above the Tri Cities because of the visual impact and the environmental impact. There is plenty of power produced in this area already. They should be located in an area where the power is needed.

I feel that these wind turbines are a hazard to our wildlife migration and daily life. Noise levels, pollution (disposal of used blades that cannot be recycled). They are ruining the skyline that is so beautiful, flashing red lights and continual turbine noise. That you would consider wind turbines as "green" is the height of misdirection and misinformation. They are not even manufactured in our country but China! If they weren't subsidized they would not even be an option. They are not helping the citizens of Washington with our power needs but the power is sent out of State. In short, I am 100% against this technology for many reasons....

Why are we allowing companies from other states to build wind farms in eastern Washington when Washington has the lowest energy rates in the nation (source: www.choosewashingtonstate.com) due to hydroelectricity?? Wind farms 1) are known to disrupt wildlife habitat and kill birds and bats, we have several species known to be impacted by this farm 3) inhibit wildlife movement with miles of fencing 3) are short-lived and resource intensive 4) are not recyclable (currently blades are cut up and disposed of in landfills) 5) require a tremendous amount of battery storage. Our state already has too many wind farms that are a huge eyesore. This feels like a money grab. If the dams are remaining in place, there is absolutely NO NEED FOR ANOTHER WIND FARM IN WASHINGTON STATE. If a renewable energy station must be built, I propose just the solar arrays, no turbines, without fencing (some other means of security that does not disturb wildlife such as video surveillance) and that hydrogen energy storage be investigated as an alternative to the battery housing facility.

If Washington was really concerned with renewable energy they would look at adding another nuclear plant. Wind farms are notoriously unreliable. They produce 1/1000 the energy of a nuclear power plant and can only produce electricity in specific weather. Several studies have shown, for wind, the average power density — meaning the rate of energy generation divided by the encompassing area of the wind plant — was up to 100 times lower than estimates previously given by leading energy experts. When taking into account the additional issues of turbine-atmosphere interaction and a small increase in temperature because of wind changes, there is no positive environmental impact; in fact, it is a negative environmental impact. Not only are wind turbines a poor use of taxpayer money, but research has shown Horse Heaven Hills is not a good candidate. Environmental impacts are minimized only when wind farms are located on the ocean and oceans have more reliable wind patterns. If Washington is looking to maximize their output, then another location needs to be used (the coast). If they are looking to actually curb fossil fuel usage and improve emissions, we need to add another nuclear power plant. The reality is that wind power is not a viable alternative, we need to be using more nuclear power. It is clean, renewable energy.

I am not in favor of a massive, intrusive turbine wind project. This is terrible for the vegetation, and the beauty of the Horse Heaven Hills. Not to mention a huge waste of the taxpayer's dollar! Thank you, Jan Lenkersdorfer

Please do not pollute the entirety of our area with more windmills. They have proven to be an ecological detriment, and there is no plan for disposing of the aging equipment. Keep the dams, and stop the windmills.
