Dust Storm April 27, 2018 in Badger Canyon looking to the SW from spirit lane T8N R 28E S 21 This would be looking at the placement of turbines 1.5 miles back. The Badger Canyon drainage canyon from HHH would be behind the group of trees.

Windmills produce low energy efficiency while representing 1. high visual pollution 2. high noise pollution 3. high light pollution 4. high kill rate of birds 5. high pollution when turbines are discarded and stacked up in less populated but scenic areas where they sit and rust away for years causing further environmental damage. We, the people, have our roots in this community and decry attempts at the exploitation of land by those outside of our community whose sole interest is financial gain. DEIS ISSUES Impacts to Wildlife, Birds, and Humans • Fugitive dust • Dust particle monitoring standards – PM size reduction to align with proposed new EPA standards • Insufficient number and inaccurately placed monitors • Monitoring data to be recorded, compiled, and analyzed by the applicant rather than unbiased 3rd parties • Wildlife and avian mortality monitoring • Wildlife and avian forage area reduction • Wildlife and avian breeding pattern disruption • Wildlife nesting areas (ferruginous hawk, burrowing owls, rattlesnakes, etc.) reduction • Wildlife corridor disruption • Blasting with accompanying noise, vibrations and dust • Low frequency noise • Low frequency vibrations • Shadow flicker • Nighttime flashing red lights • Recreation area loss (paragliding, hiking, birdwatching, ATV trails) • Future growth • Property devaluation • Visual aesthetics • Traffic disruption – long wait times during road straightening, widening, and paving • Traffic disruption - long wait times during component transport • Windshield damage • School bus safety • Hunting Impacts to Local Businesses • Tourism/wineries • Recreation area loss (paragliding, hiking, birdwatching, ATV trails) • Diversified agriculture • Traffic disruption – long wait times during road straightening, widening, and paving • Traffic disruption - long wait times during component transport Potential Impacts to Taxpayers • Property devaluation • Federal, state and county road damage from overweight vehicles • Increased fire potential & accompanying fire-fighting costs • Degraded component disposal • Decommissioning component disposal

I am writing to say that for quite a few reasons, I am not in favor of the Horse Heaven Wind Farm project proposed by Scout Clean Energy for Benton County, WA. So many of our ridgelines in Benton County are being developed for housing at a very rapid rate. The ones that remain provide unspoiled vistas and unparalleled beauty to our region. The public lands and existing roads draw local residents and tourists alike, to hike, photograph, draw and paint, and observe wildlife, and the hills provide a visual reminder and learning opportunity of the rich cultural, geological, and natural histories of the Horse Heaven Hills. The large tracts of land currently used for growing dryland wheat will likely be carved up by roads, resulting in precipitation- and wind-driven soil erosion. Large construction sites and extensive road-building in exposed areas with highly erodible soils can result in dust storms, reduced agricultural productivity through soil loss, and even landslides. Downslope temperature and wind could affect diverse agricultural areas near the project area, including orchards and vineyards where microclimates are critical to growing the high-quality fruit that this area is well-known for. Small growers and family farms could lose much-needed income. The project area is in close proximity to many rural homes and small family farms, where families have space to raise crops and animals and have sought solitude in a quiet living environment. Construction and operation of wind turbines would disrupt daily life for these residents, with whirling blades, vibrations, shadows, and flashing lights, and would likely reduce their quality of life and property values. We also can't overlook the scenic beauty, the wildflower displays, and the birds, animals, and plants that make up a beautiful, unique, and rapidly shrinking ecosystem. Additionally, the areas of high quality, largely undisturbed shrub steppe habitat and grasslands provide feeding, nesting, breeding, and hunting areas for many resident and migratory wildlife populations. There would be risks to the endangered ferruginous hawks, owls, eagles and other raptors, along with sandhill cranes and white pelicans, and songbirds who seek thermal currents and ridgetops to make their long-distance flights. Wind turbines do not appear to be very efficient and I have read that they are often shut down for frequent repairs. It would be better to place them near the areas where the power is needed. Our human environment in Benton County and surrounding areas have already been impacted by hydroelectric dams and a nuclear power plant, and there are solar facilities in the works. Surely there are better already-disturbed sites in the Pacific Northwest for wind turbines with more reliable wind and lower human and wildlife populations. Why not think bigger and address, plan, and implement energy conservation measures state-wide, in both small and large-scale ways? Energy-efficient lighting and machinery, upgrading insulation, requiring buildings to turn off excess lights out they are not occupied. Surely conservation and retro-fitting of existing structures is a lot greener than another giant wind farm in WA State. Plus, implementing widespread energy conservation measures would also provide longer-term jobs for the trades and manufacturing companies. How about an initiative with more incentives to place solar arrays on rooftops of homes, businesses, factories, shopping malls, parking lots, and even road surfaces to provide power for those buildings and also for net-metering? Siting solar farms in undeveloped areas is not an efficient use of space. Site them where infrastructure already exists. Thank you for the opportunity to comment. Mary Lilga Richland, WA

I oppose the Horse Heaven Energy project. I do not feel the wind turbines, solar panels and battery energy storage systems is in Kennewick and the Horse Heaven community best interest. Even the governor knows what an eye sore these are otherwise he'd be putting them all over the West side of the Cascade mountains and in the Columbia River Gorge from Hood River to the Mouth of the Columbia. Every concern I listened to at the public meeting was already discounted by the "independent" report. I have read Governor Inslee's letters of approval to go ahead on several projects on the East side of the Cascade Mountains and they all sound the same. The "independent" report citing the exact same thing with each concern people had for their communities. As he has promised at the "green climate" meetings he will not tolerate opposition to these projects.

Dust Pollution is a large concern not only as PM10 but especially PM2.5 and less with EPA putting out new requirements. This is a study "Airborne Dust and It's Impact on Hi-Vol Sampling Results at Richland, WA January, 1978 . This was from Phil Cook, Director of Air Pollution at Benton County he shared in 1988 with TRI-ACT as 1987-1992 were difficult times for HHH farmers keeping their topsoil from blowing.

See updated map of wind farms in Washington and Oregon regarding my earlier comment on cumulative environmental impacts to migratory birds. Source is US Wind Turbine Database. See: <https://eerscmap.usgs.gov/uswtdb/viewer/#7.33/45.741/-119.885/-10.2> Has there been any assessment of cumulative impacts to migratory birds from operation of wind farms? What do they conclude?

Attached are copies of the FACT SHEET from Tor-Citians Against Chemical Trespass giving background investigation numbers and other study reports on drift off HHH into Badger Canyon, Kiona, Red Mountain, Badger Mountain, Kennewick and Finley 1947-1993. After final WAC regulation went into effect the downwinders had 5 more years of residues from sulfonylurea herbicides that drifted off HHH to Badger Canyon, Finley, Kennewick, Kiona and Red Mountain. The last areas to get buffer zones was Finley and Badger Canyon two major hotspots.

The Burrowing owl is under federal threatened species. This is native ground nesting bird living in wide open agricultural grounds and agricultural fields like shrub-steppe ground are located are an important food for conservation and habitat for these owls. It is a specie of concern in WA and vulnerable or imperiled due to habitat lost. Protected under migratory treaty act and considered a bird need in conservation that it needs it thrives on. The conservation of the habitat is imperative to its survival. The DEIS failed to identify the burrowing owl as a species; collisions of wind turbines is a source of mortality for the species of these birds. This is an endangered specie and needs to be identified and the DEIS needs to mitigate the safety and protection of the burrowing owl as well as the habitat for its survival.

I am writing to express my support for the Horse Heaven Clean Energy Center and the role it will play in helping Washington achieve the ambitious decarbonization goals we set for ourselves with the passage of the Clean Energy Transformation Act (CETA) in 2019. I believe strongly in impact mitigation and value EFSEC's process, but know that Washington's ability to realize a carbon-free future will depend on permitting large-scale clean energy projects in a timely manner just like the Horse Heaven Clean Energy Center. This is a good project with appropriately identified mitigation measures, and backed by an experienced team that will produce up to 1,150 MW of renewable energy through a combination of wind, solar, and battery storage technology. With the passage of CETA, Washington established itself as a leader in the fight to curb global emissions. The state now has a responsibility to ensure the clean energy transition can be achieved in the necessary timeframe to facilitate fossil plant retirement, and in doing we can set an example for the rest of the nation to follow. Thank you for your consideration.

I am writing to express my support for the Horse Heaven Clean Energy Center. However, I am really writing to express the support of my grandchildren and great grandchildren and their children. What would I tell my heirs if they said "How come your generation allowed the earth to warm to nearly unlivable temperature?" I am sorry that some people's views might change but I feel that is better than most of our vegetation dying off and our water resources drying up. Please complete this project as quickly as possible. Time is running out. Arlo Petersen 209 NE 136th St Vancouver, WA 98685

External Email Dear EFSEC, The DEIS is almost 1340 pages to have printed off. When home reviewing it the charts, visual simulations, Glare maps and many others were missing 35% from the DEIS report. Since the pages are not chronological without renumbering them for what page to print it means going to the library to use the computer and print specific pages at 65% which requires staff to help do that as it changes the printing. But the cost of redoing something that what not submitted correctly should be on Scout Energy and EFSEC for not checking it. When I first asked to view this at the library as my computer is broke; they had no knowledge of the DEIS report release and what it is. How sad to list these locations without giving them an email notice as there was no communication with them that the public will want to view this. They forwarded on the information to the other mid-Columbia libraries. The size and time for printing this off is enormous and expensive. Very few people may have time to sit in the library for weeks to read the report and comprehend such a massive report in 30 days or even 45 days. The majority of the public do not know because on article was in the paper just before Christmas when many residents have been out with holidays and family. I request at least 90 days to view and interpret this humongous document and time to find technical people to help interpret what the average citizen can not understand. The communities need to have more time to educate the public as 90% of 308,000 residents in Tri-Cities have No awareness to this project that will impact everyone. Due to no local public hearings with Benton County Planning and Benton County Commissioners we have missed that open hearing for people to learn about the size and impact of this wind farm on HHH. As a resident in Badger Canyon and knowing the canyon drainage fall of 700' off the ridge to us and Tri-Cities the sound and vibration noise will echo into our community which after time is documented on health problems from sleep disorders, lack of sleep, irritability, loss of patience, anger and frustration when family and children's health is impacted, as well as animals and pets that are even more sensitive to noise. Nothing is mentioned on the rising temperatures leaving the wind farm perimeter and the timing of those rising temperatures, changes in weather patterns and increased turbulent winds impacting the most expensive diversified agricultural crops in the state including many types of orchards and the wine industry directly below the 27 mile ridge line. These increased turbulence and increased changes in rising temperature can impact not only the noise downwind but temperature increases will impact the local power grid. Also the site of the visual in Badger Canyon is in the wrong location. It is about 4 miles off. Can they correct it, please? Sincerely, Margaret Hue 29204 S 816 PR SE Kennewick, WA. 99338 509-528-0925 Sent from my iPhone

External Email Being green and mandating unproven ways to be supposedly "green" are two different things. I am green and was taught caring for our earth through WSU environmental science and engineering as well as my Native American grandmother. The proposed windmills do not pay for themselves ever over their lifetime. The companies are given money by the government to subsidize the efforts. So of course the companies want to create and operate them. The massive machines take a lot of petroleum oil to operate, the massive blades are mixed materials; therefore, they cannot be recycled, and they require an abundant amount of land, which in this case disturbs the precious minimally remaining shrub steppe. The winds are high in the spring and fall. The wind produced energy takes priority with the energy companies per requirements so the energy production by the dams gets wasted in the spring. In order to not have conflicting energy use, windmills should not be located near dams. This proposed area has an abundance of dams and nuclear power and is self-sufficient on power needs. The creation of solar panels has a huge toxic effluent (creates a lot of toxic materials such as toxic metals that pollute the earth). Many states classify solar panels as hazardous waste; therefore, they are not recycled. Both proposed "green" energy producers are not fully developed and should not take up the massive amounts of land in their beta form. It just isn't good stewardship forcing this down the throats of the locals who do not want this. To exclude the local authorities from the decision-making process is undemocratic. For the proposed land of this ungreen project, it is in a peninsula area in Benton County that has three major rivers that merge. There are massive amounts of wildlife in this area. The mighty Columbia River is in the center of it all. The birds move between Oregon and Washington over this peninsula going between the wetlands up the Yakima River to the bird refuges along the Snake and Columbia Rivers. They fly daily over the Horse Heaven Hills peninsula area to obtain their grains and head back and forth to water. Thousands and thousands and thousands of snow geese, Canadian geese, ducks, native birds, Sandhill Cranes, for example, also our National bird the Bald Eagle, and even endangered birds call this area home at some point during the year. I enjoy listening and watching these birds fly over my home in the Horse Heaven Hills but it kills me inside knowing they all could be chopped up into wasted bird burger by the proposed ungreen energy machines. The Yakama Indian Nation has worked with the Washington Department of Fish and Wildlife to reintroduce pronghorn sheep/antelope back into this area. They are beautiful roaming through the Horse Heaven Hills. These large ungreen farms will impact all of the wildlife and their mating routines. Why are dams evil regarding salmon and windmills thought of as not evil regarding birds, bees, wildlife, human health and safety, etc.? I am so confused by this whole push for ungreen energy. It is like an electrical car. You plug it in but where does the energy come from? It just doesn't sit in an outlet the energy was created somewhere. Having a bunch of electrical cars that the energy is produced from a coal plant doesn't gain anything except maybe a net loss of energy from the transmission reductions. Small modular nuclear reactors are a much more green energy creator. They take up a very small amount of land, while the proposed ungreen energy producers require massive amounts of land. We have a huge amount of land in this same area called the Hanford Nuclear Reservation that we dedicated to nuclear operations so the land is perfect for continued nuclear use. I am a third-generation Hanford scientist and I think that is truly green and wise choice for the earth. For nothing can compare to the amount of energy created by a nuclear reaction. It is reliable energy- not waiting for the wind to blow or the sun to shine. I do not support the massive destruction of the shrub steppe flora and fauna for these ungreen and unproven technologies that will destroy and impact our precious wildlife, human's quality of life and health and safety, for example. I have worked on Environmental Impact Statements most of my life, including Yucca Mountain, and clearly understand the evaluation process for proposed actions. Our area has sacrificed to the nation with the creation of the Hanford Nuclear Reservation and the creation of these ungreen environmental destructors would be a slap in the face to our historic area and our earth. External Email Being green and mandating unproven ways to be supposedly "green" are two different things. I am green and was taught caring for our earth through WSU environmental science and engineering as well as my Native American grandmother. The proposed windmills do not pay for themselves ever over their lifetime. The companies are given money by the government to subsidize the efforts. So of course the companies want to create and operate them. The massive machines take a lot of petroleum oil to operate, the massive blades are mixed materials; therefore, they cannot be recycled, and they require an abundant amount of land, which in this case disturbs the precious minimally remaining shrub steppe. The winds are high in the spring and fall. The wind produced energy takes priority with the energy companies per requirements so the energy production by the dams gets wasted in the spring. In order to not have conflicting energy use, windmills should not be located near dams. This proposed area has an abundance of dams and nuclear power and is self-sufficient on power needs. The creation of solar panels has a huge toxic effluent (creates a lot of toxic materials such as toxic metals that pollute the earth). Many states classify solar panels as hazardous waste; therefore, they are not recycled. Both proposed "green" energy producers are not fully developed and should not take up the massive amounts of land in their beta form. It just isn't good stewardship forcing this down the throats of the locals who do not want this. To exclude the local authorities from the decision-making process is undemocratic. For the proposed land of this ungreen project, it is in a peninsula area in Benton County that has three major rivers that merge. There are massive amounts of wildlife in this area. The mighty Columbia River is in the center of it all. The birds move between Oregon and Washington over this peninsula going between the wetlands up the Yakima River to the bird refuges along the Snake and Columbia Rivers. They fly daily over the Horse Heaven Hills peninsula area to obtain their grains and head back and forth to water. Thousands and thousands and thousands of snow geese, Canadian geese, ducks, native birds, Sandhill Cranes, for example, also our National bird the Bald Eagle, and even endangered birds call this area home at some point during the year. I enjoy listening and watching these birds fly over my home in the Horse Heaven Hills but it kills me inside knowing they all could be chopped up into wasted bird burger by the proposed ungreen energy machines. The Yakama Indian Nation has worked with the Washington Department of Fish and Wildlife to reintroduce pronghorn sheep/antelope back into this area. They are beautiful roaming through the Horse Heaven Hills. These large ungreen farms will impact all of the wildlife and their mating routines. Why are dams evil regarding salmon and windmills thought of as not evil regarding birds, bees, wildlife, human health and safety, etc.? I am so confused by this whole push for ungreen energy. It is like an electrical car. You plug it in but where does the energy come from? It just doesn't sit in an outlet the energy was created somewhere. Having a bunch of electrical cars that the energy is produced from a coal plant doesn't gain anything except maybe a net loss of energy from the transmission reductions. Small modular nuclear reactors are a much more green energy creator. They take up a very small amount of land, while the proposed ungreen energy producers require massive amounts of land. We have a huge amount of land in this same area called the Hanford Nuclear Reservation that we dedicated to nuclear operations so the land is perfect for continued nuclear use. I am a third-generation Hanford scientist and I think that is truly green and wise choice for the earth. For nothing can compare to the amount of energy created by a nuclear reaction. It is reliable energy- not waiting for the wind to blow or the sun to shine. I do not support the massive destruction of the shrub steppe flora and fauna for these ungreen and unproven technologies that will destroy and impact our precious wildlife, human's quality of life and health and safety, for example. I have worked on Environmental Impact Statements most of my life, including Yucca Mountain, and clearly understand the evaluation process for proposed actions. Our area has sacrificed to the nation with the creation of the Hanford Nuclear Reservation and the creation of these ungreen environmental destructors would be a slap in the face to our historic area and our earth. Hello- I was wondering what the situation is with the wind facilities around Ellensburg (in Kittitas County). You granted an expedited approval because the solar company's said they had deadlines that they had to met in contracts to sell the power ... and now all these years later, I think the one on Tjossem Road is the only one that is actually up and going. Also, maybe I'm forgetting, but I had thought that they were supposed to add plantings and screen the chain link fence they put around the facility. I thought that was part of the company's pitch to keep the industrial look of the facility toned down since the State and County have a policy that projects need to preserve the 'rural character' of the land. Please let me know what you can about these questions - thanks! Susan

External Email I am proud of the WA State position on climate change amelioration and other progressive issues. I am also writing to express my support for the Horse Heaven Clean Energy Center and the role it will play in helping Washington achieve the ambitious decarbonization goals we set for ourselves with the passage of the Clean Energy Transformation Act (CETA) in 2019. I believe strongly in impact mitigation and value EFSEC's process, but know that Washington's ability to realize a carbon-free future will depend on permitting large-scale clean energy projects in a timely manner just like the Horse Heaven Clean Energy Center. This is a good project with appropriately identified mitigation measures, and backed by an experienced team that will produce up to 1,150 MW of renewable energy through a combination of wind, solar, and battery storage technology. With the passage of CETA, Washington established itself as a leader in the fight to curb global emissions. The state now has a responsibility to ensure the clean energy transition can be achieved in the necessary timeframe to facilitate fossil plant retirement, and in doing we can set an example for the rest of the nation to follow. Thank you for your consideration. Tom Karasek

External Email I am deeply concerned about nuclear waste still shipping in to Hanford, in open, unlined pits, with leaking tanks not fixed, and a 5 year cleanup plan that looks good on paper, but will amount to nothing if not fully funded - with no accountability for progress - even as vested interests promote more nuclear energy and more radioactive waste. I am writing to express my support for the Horse Heaven Clean Energy Center and the role it will play in helping Washington achieve the ambitious decarbonization goals we set for ourselves with the passage of the Clean Energy Transformation Act (CETA) in 2019. External Email I am writing to express my support for the Horse Heaven Clean Energy Center and the role it will play in helping Washington achieve the ambitious decarbonization goals we set for ourselves with the passage of the Clean Energy Transformation Act (CETA) in 2019. I believe strongly in impact mitigation and value EFSEC's process, but know that Washington's ability to realize a carbon-free future will depend on permitting large-scale clean energy projects in a timely manner just like the Horse Heaven Clean Energy Center. This is a good project with appropriately identified mitigation measures, and backed by an experienced team that will produce up to 1,150 MW of renewable energy through a combination of wind, solar, and battery storage technology. With the passage of CETA, Washington established itself as a leader in the fight to curb global emissions. The state now has a responsibility to ensure the clean energy transition can be achieved in the necessary timeframe to facilitate fossil plant retirement, and in doing we can set an example for the rest of the nation to follow. Climate change is already here and negatively impacting lives and livelihoods and we do not have the luxury of time to mitigate its worse impacts, the time to act is now! Thank you for your consideration, Sincerely, Cigdem CAPAN

External Email Example of how much room windmills take on land. These windmills are very small compared to the proposed size of HHH windmills. Remember the windmills take a lot of petroleum to operate, kill and impact wildlife, pollinators such as bees, bugs, and bats, impacts farming and living areas, impact human health and safety, the massive windmill blades can not be recycled, and most states don't recycle solar panels since they are classified as hazardous waste, and the windmills never, ever pay for themselves- the government covers the costs. Not a smart earth or business decision. Nuclear energy is dependable - not waiting for the wind to blow or the sun to shine. We have a massive nuclear reservation in the same area with Hanford clean up and a nuclear power plant as well. Energy created from nuclear cannot compare to anything. Small modular reactor is where the future should be focused on. The footprint of the earth impacted is so small as well. Christina Caprio NEPA EIS Environmental Scientist Third Generation Hanford Nuclear Reservation Scientist Sent from my iPhone
