In thank this entity for allowing and even encouraging public input for this project. I personally learned from the meeting that there are quite a few reasons to slowly consider if this is a good location to be paved over. I recognize only one reason to just go ahead with this site location as is: it is particularly convenient for the developer.

I would hope that for the community and the environment, we could look a little further afield to find a nice big 6000 acre patch of cheatgrass that is just crying out for solar panels.

Thank you.
