Hi,

I heard about the solar development planned on Badger Mountain, and wanted to add my input to this issue.

I do not support this project, mainly because of the negative impact it will have on fauna, flora, and the entire local ecosystem in general. Badger Mountain is the home of one of the only populations of Sage Grouse in the state. This project would vastly reduce available habitat to them, making it harder to find food and nest. Consequently this population of Sage Grouse (and the entire states) could be in jeopardy of extinction.

I urge you to not approve the proposed Solar Development on Badger Mountain.

Thank you,

Austin Boese
