Hello , I am contacting you about the proposed solar project on Badger Mt . I STRONGLY OPPOSE this idea ,

I don't understand the way we (humans) do things with solar and or wind power , we already have the space for solar it's on people's homes and roofs , we should not be going into wild open spaces and putting this technology there when we could use city and town space that is closer to the people that will use the power , like the giant windmills that have destroyed thousands of acres when you could have a smaller one and a panel on every home , yes this is another example of someone's money interest dictating what is going on here and is not in the best interest of the people and the earth , no no no to the solar farm on Badger mountain . (don't get me wrong I love solar technology and I have been using it for 20 years for our cabin on the summit of Badger Mt , but it is not hurting any animals ect. because it is mounted on top of our barn and a space /lot already set aside for people , thank you for giving us a voice , all the best .
