Hi,

I would like to express my concern about the location of the proposed solar farm on Badger Mountain. I think that a better location could most certainly be found for the farm (I do agree that we need more solar farms). The problem with the proposal is that it will significantly impact a VERY endangered species, the Sage Grouse. They are absolutely beautiful, and it is so important for us to help save them. Please do not allow the solar farm to be located so close to their home. They have so little left, we have taken too much from them already. Please find a new location for the solar farm.

Thank you,

Celeste Barry
