Please don't extend carriger solar. Please don't allow them to ruin our county. Please be a tool for our community to be as good stewards as possible. Covering so much land will wipe out fragile habitat for wildlife, has even more risk of fire started by the batteries or solar panels.

If you count how many millions of acres that have been wiped out by these industrial solar projects in the pacific northwest the wildlife have no where to go to eat, raise there own families & enjoy fresh air, fresh water. Please stop the madness & greed. I am not against solar or wind or even nuclear but I am against being these push campaigns without thinking reasonably. Techra teck did not do a complete study. They did not study every season, they did not do night time studies, they did not think anyone would be paying attention and because of companies being money hungry we humans have been wiping out destroying this planet, killing off the wildlife with toxins & roads & no remorse
