I feel very strongly that all of you so called officials and those of you who think you own all this land and those of you with over filled bank accounts need to stop destroying the land along with wild life and plants down to the dirt and water that bring us all life. What makes you think because you are privileged enough to live on such pristine land that you have the right to destroy it your suppose to be taking care of it and all that live on it plant and animal. I would think that in this point of the evolution of man that we all as a human race need to slow down and put the planet first instead of our own selfish and lazy ways myself included every one of us that live in these modern times is guilty of pushing our planet to the point where it can no longer support us. How dare you dig up the soil and all the toxic chemicals to build these panels and say it is in the name of saving the planet you do realize that there won't be much of a world for your grand kids if any. You have listened to all kinds of testimonys from people with the knowledge of what what industrial solar has to offer and the bad out ways the good that seems obvious. I'm sorry if my words are strong but there is a lot at steak here there are so many other options to consider so don't let some ignorant politicians bully us in to a corner that we will have to fight our way out of cause at that point the only thing we have to lose is our planet or maybe we already have thankyou for your time and I beg you to do the write thing sincerely.
