EFSEC, solar panels are hazardous as described in RCW 70a.510. RCW 70a.510 fails to address this problem. When will EFSEC address this problem.

[Solar Panels Produce Tons of Toxic Waste—Literally \(fee.org\)](#)

[The Dark Side of Solar Power \(hbr.org\)](#)

[Letter #16 | Reduce Our Internet Footprint \(ourweb.tech\)](#)

[Toxic Chemicals in Solar Panels | Sciencing](#)

[PFAS Explained | US EPA](#) this forever chemical and others exist in solar panels. EFSEC refuses to address this deadly issue. Panels are currently being dumped in Roosevelt landfill in Klickitat County. This site and others will become future superfund clean-up sites thanks to no action by EFSEC. Inslee's photovoltaic take back program is useless. To believe a Chinese solar panel manufacturer will take back their panels is ridiculous. [RCW 70A.510.010: Photovoltaic module stewardship and takeback program—Definitions—Requirements—Enforcement—Penalty—Fees—Rule making](#). PFAS chemicals are already an environmental issue in drinking water across the state and millions of discarded toxic solar panels will exacerbate the problem. When will EFSEC address this problem? The solution is to prohibit large scale solar facilities in Washington as they will do more harm than good. You followed the laws and made good decisions at the Horse Heaven Hills project. Don't backdown. Continue the good work and prohibit large scale solar in Washington.
