Hi, the report below is more proof of the dangers of BESS and lithium-ion batteries used with renewables. Traditional methods of extinguishing fires have proven not to be effective with lithium-ion battery fires. Lithium will burn under water. The Morris, Illinois warehouse battery fire after 2 days of using methods of fire suppression the fire commander restored to was using 28 tons of cement to suffocate and extinguish the fire. This fire was cell phone and laptop batteries small in comparison to batteries in a BESS. The Cypress Creek Renewable Carriger solar project has plans for 2-acres of BESS and 10s of thousands of lithium-ion batteries. BESS systems need to outlaw across America. Greg Wagner
